*Quantifying and Exploring the Gap Between FPGAs and ASICs* Ian Kuon, Jonathan Rose, 2010-07-03 Field programmable gate arrays FPGAs which are pre fabricated programmable digital integrated circuits ICs provide easy access to state of the art integrated circuit process technology and in doing so democratize this technology of our time This book is about comparing the qualities of FPGA their speed performance area and power consumption against custom fabricated ICs and exploring ways of mitigating their deficiencies This work began as a question that many have asked and few had the resources to answer how much worse is an FPGA compared to a custom designed chip As we dealt with that question we found that it was far more difficult to answer than we anticipated but that the results were rich basic insights on fundamental understandings of FPGA architecture It also encouraged us to find ways to leverage those insights to seek ways to make FPGA technology better which is what the second half of the book is about While the question How much worse is an FPGA than an ASIC has been a constant sub theme of all research on FPGAs it was posed most directly some time around May 2004 by Professor Abbas El Gamal from Stanford University to us he was working on a 3D FPGA and was wondering if any real measurements had been made in this kind of comparison Shortly thereafter we took it up and tried to answer in a serious way
