a deeper understanding of botnet detection and prevention and suggests how both the private sector and governments can address botnet threats

Zombies and Botnets Kim-Kwang Raymond Choo,2007 Bot programs allow attackers to remotely control vulnerable computers and form virtual networks of zombies botnets Botnets can be leveraged to orchestrate concerted attacks against other computing resources for example distributed denial of service DDoS attacks against targeted networks The shift in motivation from curiosity and fame seeking to illicit financial gain has been marked by a growing sophistication in the evolution of bot malware The ABS estimated that there were over 6 65 million active internet subscribers in Australia in September 2006 Most subscribers are households with over 5 83 million household users compared with 826 000 business and government users This paper examines the activities and consequences associated with botnets and provides examples of existing incidents so that subscribers can be better informed of the risks Business government and individual householders need to be aware of risk mitigation strategies and to ensure that these strategies are implemented and updated as attacks on the internet are not likely to disappear any time soon
