Sourcebook in the Mathematics of Ancient Greece and the Eastern Mediterranean Victor J. Katz,Clemency Montelle,2024-09-17 In recent decades there has been extensive research on Greek mathematics that has considerably enlarged the scope of this area of inquiry Traditionally Greek mathematics has referred to the axiomatic work of Archimedes Apollonius and others in the first three centuries BCE However there is a wide body of mathematical work that appeared in the eastern Mediterranean during the time it was under Greek influence from approximately 400 BCE to 600 CE which remains under explored in the existing scholarship This sourcebook provides an updated look at Greek mathematics bringing together classic Greek texts with material from lesser known authors as well as newly uncovered texts that have been omitted in previous scholarship The book adopts a broad scope in defining mathematical practice and as such includes fields such as music optics and

architecture It includes important sources written in languages other than Greek in the eastern Mediterranean area during the period from 400 BCE to 600 CE which show some influence from Greek culture It also includes passages that highlight the important role mathematics played in philosophy pedagogy and popular culture The book is organized topically chapters include arithmetic plane geometry astronomy and philosophy literature and education Within each chapter the translated texts are organized chronologically The book weaves together ancient commentary on classic Greek works with the works themselves to show how the understanding of mathematical ideas changed over the centuries
