Reporting to the President

After reading sections one through six of the transcript about local education issues in the transcript, think and work together to complete the transcript. Then, write a letter to the President.

- 1. Write a letter to the President. In your letter, explain what you think can be done to address the issues. Use data and facts from each of the issues to support your arguments. The letter will be published on local education websites and used with reports, newspapers, and other print and electronic media to inform the public about local education issues.

A letter that is placed in a folder. All pieces have the guidelines with this one and you need to use the data in each. A line about support, however, is a bit hard. I think it's possible to find a way to use the data in each section to support your arguments. A specific way to do this would be to use the data in each section to support your arguments.

Chapter 3 Performance Tasks Answers:

In Search of Synergy in Small Group Performance James R. Larson, Jr.,2013-01-11 This volume critically evaluates more than a century of empirical research on the effectiveness of small task performing groups and offers a fresh look at the costs and benefits of collaborative work arrangements The central question taken up by this book is whether and under what conditions interaction among group members leads to better performance than would otherwise be achieved simply by combining the separate efforts of an equal number of people who work independently This question is considered with respect to a range of tasks idea generation problem solving judgment and decision making and from several different process perspectives learning and memory motivation and member diversity As a framework for assessing the empirical literature the book introduces the concept of synergy Synergy refers to an objective gain in performance that is attributable to group interaction Further it distinguishes between weak and strong synergy which are performance gains of different magnitude The book highlights the currently available empirical evidence for both weak and strong synergy identifies the conditions that seem necessary to produce each and suggests where the search for synergy might best be directed in the future The book is at once a high level introduction to the field a review of the field s history and a scholarly critique of the current state of the art As such it is essential reading for graduate students advanced undergraduate students and researchers interested in group dynamics generally and small group performance in particular

Short-term Visual Information Forgetting (PLE: Memory) A.H.C. van der Heijden,2014-05-09 When this title was originally published in 1981 the information processing approach to perception and memory was dominant in experimental psychology and the research reported here had major implications for future development After exploring the shortcomings of earlier work in this field the author develops a new model which he shows to be capable of accounting for a variety of experimental data connected with human information processing visual perception and attention The central theme which is discussed is how we select relevant and discard irrelevant information The basic assumption is that all incoming information is identified that is it reaches and activates the appropriate lexical entries A piece of identified information is described as a unit consisting of three distinguishable codes a visual code a lexical or semantic code and a motor or action code Identified information decays fast so selective attention operates by selecting those units which have to be saved from this rapid decay In a sense therefore the human information processor is described as struggling against forgetting
