Computer-aided Chemical Process Design Tetsuo Maejima, 1970 **Energy Systems Engineering**, 2008-10-13 Inspired by the leading authority in the field the Centre for Process Systems Engineering at Imperial College London this book includes theoretical developments algorithms methodologies and tools in process systems engineering and applications from the chemical energy molecular biomedical and other areas It spans a whole range of length scales seen in manufacturing industries from molecular and nanoscale phenomena to enterprise wide optimization and control As such this will appeal to a broad readership since the topic applies not only to all technical processes but also due to the interdisciplinary expertise required to solve the challenge The ultimate reference work for years to come

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing

the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field Product-Driven Process Design Edwin Zondervan,Cristhian Almeida-Rivera,Kyle Vincent Camarda,2020-01-20 Product driven process design from molecule to enterprise provides process engineers and process engineering students with access to a modern and stimulating methodology to process and product design Throughout the book the links between product design and process design become evident while the reader is guided step by step through the different stages of the intertwining product and process design activities Both molecular and enterprise wide considerations in design are introduced and addressed in detail Several examples and case studies in emerging areas such as bio and food systems pharmaceuticals and energy are discussed and presented This book is an excellent guide and companion for undergraduate graduate students as well as professional practitioners **23 European Symposium on Computer Aided Process Engineering** Adama Ouattara,Luc Pibouleau,Catherine Azzaro-Pantel,Serge Domenech,2013-06-10 The well known benchmark process for hydrodealkylation of toluene HDA to produce benzene is revisited in a multi objective approach to identify environmentally friendly and cost effective solutions Some guidelines to develop an eco design framework for chemical processes involving multiple criteria to be satisfied simultaneously are proposed based on simulation optimization multiple choice decision making procedures and life cycle assessment Two studies related to the selection of the primary energy source either fuel oil or natural gas for the utility production system UPS of the HDA process are conducted In each case a multi objective optimization problem involving the total annual cost of the process and five environmental burdens is carried out **Chemical Engineering Dynamics, Includes CD-ROM** John Ingham,2007 In this book the modelling of dynamic chemical engineering processes is presented in a highly understandable way using the unique combination of simplified fundamental theory and direct hands on computer simulation The mathematics is kept to a minimum and yet the nearly 100 examples supplied on www.wiley.vch.de illustrate almost every aspect of chemical engineering science Each example is described in detail including the model equations They are written in the modern user friendly simulation language Berkeley Madonna which can be run on both Windows PC and Power Macintosh computers Madonna solves models comprising many ordinary differential equations using

very simple programming including arrays It is so powerful that the model parameters may be defined as sliders which allow the effect of their change on the model behavior to be seen almost immediately Data may be included for curve fitting and sensitivity or multiple runs may be performed The results can be seen simultaneously on multiple graph windows or by using overlays The resultant learning effect of this is tremendous The examples can be varied to fit any real situation and the suggested exercises provide practical guidance The extensive experience of the authors both in university teaching and international courses is reflected in this well balanced presentation which is suitable for the teacher the student the chemist or the engineer This book provides a greater understanding of the formulation and use of mass and energy balances for chemical engineering in a most stimulating manner This book is a third edition which also includes biological environmental and food process examples
