This book provides a thorough introduction to the Texas Instruments MSP430™ microcontroller. The MSP430 is a 16-bit reduced instruction set RISC processor that features ultra-low power consumption and integrated digital and analog hardware. Variants of the MSP430 microcontroller have been in production since 1993. This provides for a host of MSP430 products including evaluation boards, compilers, software examples, and documentation. A thorough introduction to the MSP430 line of microcontrollers, programming techniques, and interface concepts are provided along with considerable tutorial information with many illustrated examples. Each chapter provides laboratory exercises to apply what has been presented in the chapter. The book is intended for an upper-level undergraduate course in microcontrollers or mechatronics but may also be used as a reference for capstone design projects. Also, practicing engineers already familiar with another microcontroller who require a quick tutorial on the microcontroller will find this book very useful. This second edition introduces the MSP430FR5994 and the MSP430FR2433 LaunchPads. Both LaunchPads are equipped with a variety of peripherals and Ferroelectric Random Access Memory (FRAM). FRAM is a nonvolatile low-power memory with functionality similar to flash memory. **Arduino Microcontroller Processing for Everyone!** Steven Barrett, 2022-11-10

This book is about the Arduino microcontroller and the Arduino concept. The visionary Arduino team of Massimo Banzi, David Cuartielles, Tom Igoe, Gianluca Martino, and David Mellis launched a new innovation in microcontroller hardware in 2005: the concept of open-source hardware. Their approach was to openly share details of microcontroller-based hardware design platforms to stimulate the sharing of ideas and promote innovation. This concept has been popular in the software world for many years. This book is intended for a wide variety of audiences, including students of the fine arts, middle and senior high school students, engineering design students, and practicing scientists and engineers. To meet this wide audience, the book has been divided into sections to satisfy the need of each reader. The book contains many software and hardware examples to assist the reader in developing a wide variety of systems. For the examples, the Arduino UNO R3 and the Atmel ATmega328 are employed as the target processor. The second edition has been updated with the latest on the Arduino UNO R3 processor, changes to the Arduino Development Environment, and several extended examples. Table of Contents: Getting Started, Programming Embedded Systems, Design Serial Communication Subsystem, Analog to Digital Conversion, ADC Interrupt Subsystem, Timing Subsystem, Atmel AVR Operating Parameters and Interfacing. **The HCS12 / 9S12: An Introduction**
