The Lifecycle Of Software Objects Ted Chiang:

The Lifecycle of Software Objects Ted Chiang, 2010 What is the best way to create artificial intelligence In 1950 Alan Turing wrote Many people think that a very abstract activity like the playing of chess would be best It can also be maintained that it is best to provide the machine with the best sense organs that money can buy and then teach it to understand and speak English This process could follow the normal teaching of a child Things would be pointed out and named etc Again I do not know what the right answer is but I think both approaches should be tried The first approach has been tried many times in both science fiction and reality In this new novella at over 30 000 words his longest work to date Ted Chiang offers a detailed imagining of how the second approach might work within the contemporary landscape of startup companies massively multiplayer online gaming and open source software It is a story of two people and the artificial intelligences they helped create following them for more than a decade as they deal with the upgrades and obsolescence that are inevitable in the world of software At the same time it is an examination of the difference between processing power and intelligence and of what it means to have a real relationship with an artificial entity
