Iyengar, 2007 This work is based on the experience and notes of the authors while teaching mathematics courses to engineering students at the Indian Institute of Technology New Delhi It covers syllabi of two core courses in mathematics for engineering students **Advanced Engineering Mathematics** Rajinder Kumar Jain, 2002 **Differential Equations** Amrinder Pal Singh, 2022-02-22 Designed for undergraduate and postgraduate students of Mathematics this book can be used as an introductory book on Differential Equations for those working in the area of science and engineering and preparing for various competitive examinations This book includes almost all the methods for finding solution of ordinary differential equations and partial differential equations with applications The text also contains the topics of Laplace transforms and Fourier transforms and their applications in finding solutions of differential equations Ordinary Differential Equations for Engineers Ali Ümit Keskin, 2018-09-01 This monograph presents teaching material in the field of differential equations while addressing applications and topics in electrical and biomedical engineering primarily The book contains problems with varying levels of difficulty including Matlab simulations The target audience comprises advanced undergraduate and graduate students as well as lecturers but the book may also be beneficial for practicing engineers alike Numerical Analysis with Algorithms and Programming Santanu Saha Ray, 2018-09-03 Numerical Analysis with Algorithms and Programming is the first comprehensive textbook to provide detailed coverage of numerical methods their algorithms and corresponding computer programs It presents many techniques for the efficient numerical solution of problems in science and engineering Along with numerous worked out examples end of chapter exercises and Mathematica programs the book includes the standard algorithms for numerical computation Root finding for nonlinear equations Interpolation and approximation of functions by simpler computational building blocks such as polynomials and splines The solution of systems of linear equations and triangularization Approximation of functions and least square approximation Numerical differentiation and divided differences Numerical quadrature and integration Numerical solutions of ordinary differential equations ODEs and boundary value problems Numerical solution of partial differential equations PDEs The text develops students understanding of the construction of numerical algorithms and the applicability of the methods By thoroughly studying the algorithms students will discover how various methods provide accuracy efficiency scalability and stability for large scale systems *Mathematical Reviews*, 2003 **Introduction to Surface and Superlattice Excitations** Michael G. Cottam, D.R. Tilley, 2019-05-07 Cottam and Tilley provide an introduction to the properties of wave like excitations associated with surfaces and interfaces The emphasis is on acoustic optic and magnetic excitations and apart from one section on liquid surfaces the text concentrates on solids The important topic of superlattices is also discussed in which the different kinds of excitation are considered from a unified point of view Throughout the book the authors are careful to relate theory and experiment and all of the most important experimental

techniques are described The theoretical treatment assumes only a knowledge of undergraduate physics except for Green function methods that are used in a few sections these methods are developed in an appendix The book also contains extensive references enabling the reader to consult the research and review literature Each of the main chapters contains problems to allow the reader to develop topics presented in the text Indian National Bibliography B. Handbook of Remote Biometrics Massimo Tistarelli,Stan Z. Li,Rama Chellappa,2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements One of the main limitations of the precursors of today's biometrics which is still present in the vast majority of the existing biometric systems has been the need to keep the device in close contact with the subject to capture the biometric measurements This clearly limits the applicability and convenience of biometric systems This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics IAPR TC4 The last four chapters of the book are derived from some of the best presentations by the participating students of the school The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics **Ganita Bhārati** ,1982 Advance Engineering Mathematics R.
