Software Technologies Hans-Georg Fill, Francisco José Domínguez Mayo, Marten van Sinderen, Leszek A. Maciaszek, 2024-05-23 This book constitutes the refereed post proceedings of the 18th International Conference on Software Technologies ICSoft 2023 held in Rome Italy during July 10-12, 2023. The 7 full papers included in this book were carefully reviewed and selected from 129 submissions. They focus on Software Engineering and Systems Development, Software Systems and Applications, and Foundational and Trigger Technologies. Ulrich's Periodicals Directory 2005 R. R. Bowker LLC, 2004. Transactions on Computational Collective Intelligence XXIV Ngoc Thanh Nguyen, Ryszard Kowalczyk, Joaquim Filipe, 2016-09-29 These transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the semantic Web, social networks, and multi-agent systems. TCCI strives to cover new methodological, theoretical, and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals, artificial and/or natural. The application of multiple computational intelligence technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc. aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This twenty-fourth issue contains 9 carefully selected and revised contributions. **Multidisciplinary Approaches to Culminating Student Experiences** Michael G. Strawser, Robin Yaure, 2024-05-14 Despite the relatively recent popularity of culminating experiences, a multidisciplinary and practical resource that provides information for all types of culminating student experiences is not yet available. The idea for this volume arose because of the recognition that a holistic and applied resource for those looking to have general knowledge of different ways to assess student learning, especially at the undergraduate level, was lacking. This text seeks to fill a gap and provide a historical context for culminating experiences, suggestions for assessment, foundational knowledge for different types of projects, and finally, approaches to using these experiences in various disciplines. Because of the information desired, experts in their field from a wide variety of disciplines were approached to be chapter contributors. This resource focuses predominantly on undergraduate students, but many of the chapters can either be applied to both undergraduate and graduate students, e.g., thesis, or specifically focus on the graduate student population, e.g., dissertation. The Unified Modeling Language, 2003. The Impact of Interfaces on the Performance of Organic Photovoltaic Cells Roland Steim, 2010 Organic photovoltaic is an attractive technology to solve future energy supply scenarios. To further increase the potential of this technology, novel absorber materials and interface materials have to be developed. In this work, the paramount importance of interface materials for efficient as well as stable organic photovoltaic cells and modules is demonstrated. The general requirements of interface materials are elaborated, and properties of a novel interface material which meets the demands are investigated experimentally and by simulations.
