Below these general problems, for each inheritance the Punnett square is shown both with genotypes and phenotypes.

1. In humans, the allele for straight hair structure is recessive to the allele for curved hair structure. If two heterozygous hair structure, what is the chance that a child will have straight hair (represented by a lowercase letter) if two heterozygous parents are crossed?

**Vogel and Motulsky's Human Genetics** Friedrich Vogel, Arno G. Motulsky, 2013-06-29. The first edition of this book published in 1979 was found useful by many students and was well received by the scientific community. Since the book was first written, human genetics has undergone dramatic developments, mainly due to the introduction of new concepts and techniques from molecular biology. Concurrently, basic scientists have become increasingly interested in problems of human genetics. More than 700 human genes have been mapped, genes of previously unsuspected complexity such as the gene for factor VIII have become known, and the structure of noncoding DNA sequences is being analyzed with the aim of understanding gene regulation. DNA diagnosis is being rapidly introduced into medical genetics. All this, as well as the extensive progress in most other fields of human and medical genetics, had to be considered in the preparation of this second edition. The book has been extensively revised and rewritten. A substantial new section dealing with gene and chromosomal structure at the molecular level has been added. The newer knowledge of molecular genetics has been incorporated, and the conceptual and practical contribution of DNA methods, for example in the hemoglobinopathies and in some other diseases, is discussed. Many new figures and tables have been added, and some illustrative material has been replaced. We have read carefully the many friendly and sometimes flattering reviews of the first edition.
