results in shutting down the plant to clean the facility The annual cost of corrosion to the oil and gas industry in the United States alone is estimated at 27 billion According to NACE International leading some to estimate the global annual cost to the oil and gas industry as exceeding 60 billion In addition corrosion commonly causes serious environmental problems such as spills and releases An essential resource for all those who are involved in the corrosion management of oil and gas infrastructure Corrosion Control in the Oil and Gas Industry provides engineers and designers with the tools and methods to design and implement comprehensive corrosion management programs for oil and gas infrastructures The book addresses all segments of the industry including production transmission storage refining and distribution Selects cost effective methods to control corrosion Quantitatively measures and estimates corrosion rates Treats oil and gas infrastructures as systems in order to avoid the impacts that changes to one segment if a corrosion management program may have on others Provides a gateway to more than 1 000 industry best practices and international standards

Techniques for Protecting Overhead Lines in Winter Conditions Masoud Farzaneh, William A. Chisholm, 2022-02-10 This book offers a comprehensive review of the various options for improving the performance of overhead power lines in winter conditions taking into account both mechanical and electrical aspects Experience within the CIGRE community reveals many strategies to protect overhead power lines from damage caused by heavy build up of ice and snow or electrical issues such as insulator icing flashovers The initial approach is to consider the predicted ice loads from the available databases This is supplemented with some fundamental aspects of icing physics that affect accretion rate as well as factors in ice shedding on traditional metal ceramic and novel treated surfaces These ice physics concepts structure the ways to categorize and evaluate methods to reduce or prevent icing on conductors and ground wires or to prevent flashover of insulators Many utilities in cold climate regions have developed and used methods and strategies to reduce ice loads using anti icing AI and or de icing DI methods In general AI methods are used before or early during ice build up while DI methods are activated during and sometimes after ice build up The book describes and discusses some historical operational or potential AI DI systems in the ice physics context This supports a comprehensive review of AI coatings including concepts relevant material properties application methods and finally test methods for characterizing the long term performance

Encyclopedia of Polymer Degradation George Wypych, 2025-01-23 Encyclopedia of Polymer Degradation compiles research results for the most important and commonly used polymers identifying their unitary degradative chemical reactions including the fate of products resulting from primary degradation which can influence further degradation mechanisms and rates The book proposes potential mechanisms of reactions and chemical descriptions of the sequence for events for each degradation mode It takes a knowledge based approach with the aim of facilitating more effective prevention of waste and environmental pollution caused by material failures and also discusses the limitations of typical weathering studies challenges in lab based weathering studies and the importance of understanding various degradation mechanisms Outlines the limitations of typical weathering studies

considering how they take place in natural outdoor environments where conditions aren't controlled and discussing how these limitations can be effectively dealt with. Covers challenges in laboratory weathering studies and how these can be overcome. Emphasizes the importance of understanding degradation mechanisms enabling the selection of the most resistant materials for specific applications and the development of effective stabilization strategies to protect materials against degradation.

Evaluation of Service Life of Noise Barrier Walls in Illinois Dianne H. Kay, 1999. The scope of this project included development of a means to quantify the service lives of materials used for construction of noise barriers in Illinois, development of a life cycle cost model for the evaluation of alternative materials and evaluation of the need for potential changes to the Special Provisions for noise barrier construction currently used in Illinois. The project included a survey of all state departments of transportation (DOTs) to develop information on experiences with noise barrier materials and products which showed that nationwide less than 1% of noise barriers by length have been repaired or replaced and that few DOTs use life cycle cost analysis for selection of noise barriers. A comprehensive list of the materials currently approved for use in Illinois by the Illinois Highway Development Council was developed. The current condition of existing Illinois noise barriers was assessed by field observation and Illinois Department of Transportation (IDOT) maintenance personnel were surveyed to develop information on maintenance histories, costs of repairs, scheduled repair or replacement of barriers and estimated service lives of barriers in place. Service life criteria were developed considering the structural, acoustical and aesthetic functions of noise barriers. A life cycle cost model was developed and the relative life cycle costs of existing Illinois noise barriers were computed. Noise barrier specifications supplied by IDOT and the Illinois State Toll Highway Authority were reviewed and recommendations for improving the organization and content of the specifications

were made

Thermal Spray Removal of Lead-based Paint from the Viaduct Bridge at Rock Island Arsenal, IL J. H. Boy, Robert Weber, Ashok Kumar, 1998 Lead based paint has in the past been used on many steel structures to control corrosion Peeling lead based paint cannot be overcoated but must be removed During removal by conventional techniques a tight containment structure is required to keep lead dust from contaminating air soil or water and special worker protection is required These protective measures are cumbersome and expensive This report documents a field demonstration at the Rock Island Arsenal IL that validated the thermal spray vitrification TSV process as a safe and effective technique for removing lead based paint from a steel bridge Specially formulated glass was applied in a molten state to painted steel using a conventional thermal spray application system The molten glass reacts with the paint and encapsulates the lead The cooled glass readily cracks and falls off removing the paint After onsite remelting of the glass waste to complete the encapsulation process the final waste product is chemically inert and may be disposed of in a regular landfill The Illinois Environmental Protection Agency Division of Air Pollution Control determined that the glass remelt process could be considered a paint removal operation for which no air quality permit was required
