Chapter Natural Resources Types Classification And Scarcity:

Globalisation and Natural Resources Law Elena Blanco, Jona Razzaque, 2011-01-01 This book is a very welcome addition to publications on globalisation and natural resources management It adopts a very broad approach to this important subject it includes the general issues such as trade and investment It deals with very complex questions of permanent sovereignty over natural resources the right to development the role of indigenous peoples in resource management This publication also provides the reader with general underlying principles and approaches to natural resources management such as sustainable use the precautionary principle the principle of common but differentiated responsibilities and the ecosystem approach regulatory approach etc The book is very analytical and gives a lot of food for thought for readers Malgosia Fitzmaurice Queen Mary University of London UK The book is the first of its kind to deal in depth with complex cross cutting issues relating to globalization and natural resources The authors demonstrate not only a broad range of knowledge but also provides deep insights into what will be needed to make the transition from economic globalization to sustainable globalization including improved resource efficiency and sustainable development and inclusive and participatory governance In particular the authors consider specific approaches in such sectors as water resources renewable energy and biological resources The book has carefully documented and analyzed numerous international regional and national legal frameworks as well as relevant theories and principles It is a must for every law library as well as for policy makers administrators academics non governmental bodies and civil societies We owe a great debt to the authors for their painstaking comprehensive research Koh Kheng Lian National University of Singapore Globalization as a means of aptly capturing political social cultural and above all else economic phenomena has been well documented and the subject of a multitude of comment What has perhaps been less well studied is its relationship with natural resource management Thus this work by Merino Blanco and Razzaque is to be commended Moreover by focusing on globalization an important truth is revealed It is neither about the diminution of the role of the State nor the ascendancy of the multinational corporation but rather a more nuanced and complex interaction which we are only beginning to appreciate This book is an important contribution to that debate Duncan French University of Sheffield UK While sustainable development requires State regulation of the exploitation of natural resources globalisation as originally conceived pushed for free and unfettered markets creating a fundamental tension between the two approaches This book attempts to find a way towards their reconciliation with inspiring results The book explores many themes especially how globalisation may contribute to the solution of the problems it has caused by helping to empower non state actors around the world so that the international decision making processes become more inclusive transparent and oriented towards sustainable development Ximena Fuentes Universidad Alonso Ibanez Chile and ILA Co Rapporteur on the Commission on Sustainable Development This book examines the complex relationships between trade human rights and the environment within natural resources law It

discusses key theories and challenges whilst exploring the concepts and approaches available to manage crucial natural resources in both developed and developing countries. Primarily aimed at undergraduates and postgraduates, it includes exercises, questions, and discussion topics for courses on globalisation and/or natural resources law, as well as an ample bibliography for those interested in further research. The book will therefore serve as an invaluable reference tool for academics, researchers, and activists alike.

Economic Theories of Exhaustible Resources T. J. C. Robinson, 2017-10-18
Originally published in 1989, Professor Robinson begins by examining natural resource classification and the nature of return in mining, giving particular emphasis to different sources of long-run price changes in mining and their relevance for user cost and the economic treatment for exhaustible resources. He then traces the development of the economic theory of exhaustible resources from the last quarter of the eighteenth century to the first quarter of the twentieth, documenting the differing views of various authors about the future availability of mineral resources and the extent of user cost involved in their exploitation. He identifies a link between the perceived availability of exhaustible resources and the nature of the economic theory used to explain their exploitation. This book should be of interest to students and researchers of Economic Theory and Policy.

The Foundations of National Prosperity Richard Theodore Ely, Ralph Henry Hess, Charles Kenneth Leith, 1917

Natural Resources and Economic Growth Marc Badia-Miró, Vicente Pinilla, Henry Willebald, 2015-05-22
The relationship between natural capital and economic growth is an open debate in the field of economic development. Is an abundance of natural resources a blessing or a curse for economic performance? The field of Economic History offers an excellent vantage to explore the relevance of institutions, technical progress, and supply-demand drivers. *Natural Resources and Economic Growth* contains theoretical and empirical articles by leading scholars who have studied this subject in different historical periods from the 19th century to the present day and in different parts of the world. Part I presents the theoretical issues and discusses the meaning of the curse and the relevance of the historical perspective. Part II captures the diversity of experiences, presenting thirteen independent case studies based on historical results from North and South America, Africa, Asia, Oceania, and Europe. This book emphasizes that an abundance of natural resources is not a fixed situation. It is a process that reacts to changes in the structure of commodity prices and factor endowments, and progress requires capital, labour, technical change, and appropriate institutional arrangements. This abundance is not a given but is part of the evolution of the economic system. History shows that institutional quality is the key factor to deal with abundant natural resources, and especially with the rents derived from their use and exploitation. This wide-ranging volume will be of great relevance to all those with an interest in economic history, development, economic growth, natural resources, world history, and institutional economics.

Introduction to Environmental Economics Nick Hanley, Jason F. Shogren, Ben White, Benedict White, 2019
The only easy-to-read and practical non-specialist introduction to key concepts in environmental economics, written by an international author team.

Conservation and Recreation in Protected Areas Yun Ma, 2016-05-12
This

book provides a comprehensive and up to date comparative study of the management and resolution of conflicts between conservation and recreation in protected areas in the US and China Competing claims on the use of nature increasing regulation of land use and recreational activities and the conflicting goals between conservation and development have led to a rise in conflicts in the designation and management of protected areas How to effectively manage and resolve these conflicts has become a challenge for both legislators and managers By adopting an institutional dimension in legal interpretation this book critically examines how such conflicts are dealt with in the legal regimes of the US and China while exploring interactions between legislatures agencies and courts The book searches for a plausible solution to improve the legal framework of protected areas in China by emulating pertinent mechanisms developed in the US whilst also presenting legal and policy recommendations to the US This informative book will be useful for legal scholars in Chinese law nature conservation law administrative law and comparative law
