

Respiratory System Review Outline

List the functions of the respiratory system

Gas exchange, speech, pH control in body fluids, blood pressure regulation (angiotensin II), assists venous blood and lymph flow, helps filter and dissolve clots, assists defecation

Name the two main divisions of the respiratory system and the structures for each

Anatomical divisions: Upper: nose through larynx. Lower: trachea through lungs.
Functional divisions: Conducting division (nostrils through main bronchioles) and respiratory division (gas exchange at respiratory bronchioles and alveoli)

Identify the differing characteristics of mucosa in different areas of the respiratory tract and describe their primary function

Most of the conducting division is pseudostratified ciliated columnar epithelium to filter and purify inhaled air, except the oropharynx which is stratified squamous to provide protection against abrasion and the respiratory bronchioles and alveoli which are simple squamous to allow for easy gas exchange

Describe the functions of the structures in the upper and lower respiratory tract

Nasal cavity: warms, filters and moistens air. Conducting structures: conduct air down to gas exchange surfaces while purifying it. Respiratory bronchioles and alveoli: exchange of gases

List the sequence of structures that air passes through, from the nose to the alveoli

Nasal cavity, pharynx, larynx, trachea, main (primary) bronchi, lobar (secondary bronchi, segmental (tertiary bronchi), bronchioles, terminal bronchioles, respiratory bronchioles, alveolar duct, atrium, alveoli

Name the attachments of the vocal cords and how their movements affect sound pitch

Thyroid cartilage and arytenoid cartilage. Wider apart for deeper pitch, closer together for higher pitch

Differentiate the structure of the right lung from the left lung
