

Chapter 9: Plate Tectonics, Earthquakes and Volcanoes

CONTINENTAL DRIFT

Continents were "drifting" across the Earth,

Wegener was convinced that all of Earth's continents were once part of an enormous, single landmass called Pangaea or Pangea. Fossil was used as evidence

Main problem with Wegener's initial theory : unsure of how the continents moved apart from one another.

Subduction Dynamics Gabriele Morra, David A. Yuen, Scott D. King, Sang Mook Lee, Seth Stein, 2015-11-02 Subduction dynamics has been actively studied through seismology mineral physics and laboratory and numerical experiments Understanding the dynamics of the subducting slab is critical to a better understanding of the primary societally relevant natural hazards emerging from our planetary interior the megathrust earthquakes and consequent tsunamis Subduction Dynamics is the result of a meeting that was held between August 19 and 22 2012 on Jeju island South Korea where about fifty researchers from East Asia North America and Europe met Chapters treat diverse topics ranging from the response of the ionosphere to earthquake and tsunamis to the origin of mid continental volcanism thousands kilometers distant from the subduction zone from the mysterious deep earthquakes triggered in the interior of the descending slabs to the detailed pattern of accretionary wedges in convergent zones from the induced mantle flow in the deep mantle to the nature of the paradigms of earthquake occurrence showing that all of them ultimately are due to the subduction process Volume highlights include Multidisciplinary research involving geology mineral physics geophysics and geodynamics Extremely large scale numerical models with state of the art high performance computing facilities Overview of exceptional three dimensional dynamic representation of the evolution of the Earth interiors and of the earthquake and subsequent tsunami dynamics Global risk assessment strategies in predicting natural disasters This volume is a valuable contribution in earth and environmental sciences that will assist with understanding the mechanisms behind plate tectonics and predicting and mitigating future natural hazards like earthquakes volcanoes and tsunamis

study of the motions and deformations of the Earth's crust that are current or recent in geologic time The Mediterranean region is one of the most important regions for neotectonics and related natural hazards This volume focuses on the neotectonics of the Eastern Mediterranean region which has experienced many major extensive earthquakes including the devastating Izmit Turkey earthquake on August 17 1999 The event lasted for 37 seconds killing around 17 000 people injuring 44 000 people and leaving approximately half a million people homeless Since then several North American European and Turkish research groups have studied the neotectonics and earthquake potential of the region using different geological and geophysical methods including GPS studies geodesy and passive source seismology Some results from their studies were presented in major North American and European geological meetings This volume highlights the work involving the Eastern Mediterranean region which has one of the world's longest and best studied active strike slip horizontal motion faults the east west trending North Anatolian fault zone which is very similar to the San Andreas fault in California This volume features discussions of Widespread applications in measuring plate motion that have strong implications in predicting natural disasters like earthquakes both on a regional and a global scale Recent motions particularly those produced by earthquakes that provide insights on the physics of earthquake recurrence the growth of mountains orogenic movements and seismic hazards Unique methodical approaches in collecting tectonophysical data including field seismic experimental computer based and theoretical approaches Active Global Seismology is a valuable resource for geoscientists particularly in the field of tectonophysics geophysics geodynamics seismology structural geology environmental geology and geoengineering Read an interview with the editors to find out more <https://eos.org/editors-vox/neotectonics-and-earthquake-forecasting> *Proceedings of the Eighth Lunar Science Conference, Houston, Texas, March 14-18, 1977: The moon and the inner solar system* Lunar Science Institute,1977 **Physics Briefs** ,1994 Large Meteorite Impacts III Thomas Kenkmann,Friedrich Hörz,Alexander Deutsch,2005-01-01 The third volume of the series Large Meteorite Impacts provides an updated and comprehensive overview of modern impact crater research In 26 chapters more than 90 authors from Europe the United States Russia Canada and South Africa give a balanced firsthand account of the multidisciplinary field of cratering science with reports on field studies geophysical analyses and experimental and numerical simulations Nine chapters focus on structure geophysics and cratering motions of terrestrial craters Recent advances in impact ejecta studies and shock metamorphism are assembled each with seven chapters and three chapters extend the scope from a terrestrial to a planetary
