

### Section 1.1

1) Write an algorithm that finds the largest number in a list (an array) of  $n$  numbers.

Input: positive integer  $n$ , list of numbers  $S$  indexed from 1 to  $n$

Output: the maximum element in the list  $S$

```
number findMax(int n, const keytype S[ ]) {  
    index i;  
    number max = S[1];  
    for(i = 2; i <= n; i++)  
        if(S[i] > max)  
            max = S[i];  
    return max;  
}
```

2) Write an algorithm that finds the  $m$  smallest numbers in a list of  $n$  numbers.

Input: positive integer  $n$ , list of numbers  $S$  indexed from 1 to  $n$ , empty list of numbers  $Small$  indexed from 1 to  $m$ .

Output: the list  $Small$  with the smallest  $m$  numbers in it.

```
void find_m_Smallest(int n, const keytype S[ ], keytype Small[]) {  
    index i, j, k;  
    Small[1] = S[1];  
    for(i = 2; i <= n; i++) {  
        if(j <= m)  
            find index j where S[i] needs to be inserted in Small, such that\  
                Small stays sorted in non-decreasing order;  
        for(k = m-1; k >= j; k--)  
            Small[k+1] = Small[k]; //shift right  
        Small[j] = S[i]; //insert S[i]  
    }  
}

*A Mathematical Theory of Design: Foundations, Algorithms and Applications* D. Braha, O. Maimon, 2013-04-17 Formal Design Theory PDT is a mathematical theory of design The main goal of PDT is to develop a domain independent core model of the design process The book focuses the reader's attention on the process by which ideas originate and are developed into workable products In developing PDT we have been striving toward what has been expressed by the distinguished scholar Simon 1969 that the science of design is possible and some day we will be able to talk in terms of well established theories and practices The book is divided into five interrelated parts The conceptual approach is presented first Part I followed by the theoretical foundations of PDT Part II and from which the algorithmic and pragmatic implications are deduced Part III Finally detailed case studies illustrate the theory and the methods of the design process Part IV and additional practical considerations are evaluated Part V The generic nature of the concepts theory and methods are validated by examples from a variety of disciplines FDT explores issues such as algebraic representation of design artifacts idealized design process cycle and computational analysis and measurement of design process complexity and quality FDT's axioms convey the assumptions of the theory about the nature of artifacts and potential modifications of the artifacts in achieving desired goals or functionality By being able to state these axioms explicitly it is possible to derive theorems and corollaries as well as to develop specific analytical and constructive methodologies

computational models of natural evolutionary systems genetic algorithms evolution strategies evolutionary programming and genetic programming In addition they work well in the search for global solutions to optimization problems allowing the production of optimization software that is robust and easy to implement Furthermore these algorithms can easily be hybridized with traditional optimization techniques This book presents state of the art lectures delivered by international academic and industrial experts in the field of evolutionary computing It bridges artificial intelligence and scientific computing with a particular emphasis on real life problems encountered in application oriented sectors such as aerospace electronics telecommunications energy and economics This rapidly growing field with its deep understanding and assessment of complex problems in current practice provides an effective modern engineering tool This book will therefore be of significant interest and value to all postgraduates research scientists and practitioners facing complex optimization problems
