Computational Methods in Earthquake Engineering Manolis Papadrakakis, Michalis Fragiadakis, Vagelis Plevris, 2013-05-30 This book provides an insight on advanced methods and concepts for the design and analysis of structures against earthquake loading This second volume is a collection of 28 chapters written by leading experts in the field of structural analysis and earthquake engineering Emphasis is given on current state of the art methods and concepts in computing methods and their application in engineering practice The book content is suitable for both practicing engineers and academics covering a wide variety of topics in an effort to assist the timely dissemination of research findings for the mitigation of seismic risk Due to the devastating socioeconomic consequences of seismic events the topic is of great scientific interest and is expected to be of valuable help to scientists and engineers The chapters of this volume are extended versions of selected papers presented at the COMPDYN 2011 conference held in the island of Corfu Greece under the auspices of the European Community on Computational Methods in Applied Sciences ECCOMAS

Landslides and Engineered Slopes. Experience, Theory and Practice Stefano Aversa, Leonardo Cascini, Luciano Picarelli, Claudio Scavia, 2018-04-17 Landslides and Engineered Slopes Experience Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides Naples Italy 12-19 June 2016 The book aims to emphasize the relationship between landslides and other natural hazards Hence three of the main sessions focus on Volcanic induced landslides Earthquake induced landslides and Weather induced landslides respectively while the fourth main session deals with Human induced landslides Some papers presented in a special session devoted to Subareal and submarine landslide processes and hazard and in a Young Session complete the book Landslides and Engineered Slopes Experience Theory and Practice underlines the importance of the classic approach of modern science which moves from experience to theory as the basic instrument to study landslides Experience is the key to understand the natural phenomena focusing on all the factors that play a major role Theory is the instrument to manage the data provided by experience following a mathematical approach this allows not only to clarify the nature and the deep causes of phenomena but mostly to predict future and if required manage similar events Practical benefits from the results of theory to protect people and man made works Landslides and Engineered Slopes Experience Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics geotechnical engineering engineering geology and geology

Probabilistic performance-based seismic design fib Fédération internationale du béton, 2012-05-07 In the last ten to fifteen years a vast amount of research has been undertaken to improve on earlier methods for analysing the seismic reliability of structures These efforts focused on identifying aspects of prominent relevance and disregarding the inessential ones with the goal of producing methods that are both more efficient and easier to use in practice Today this goal can be said to be substantially achieved During these years scientific activity covered all of the many aspects involved in such a multi disciplinary problem ranging from seismology to geotechnics to

structural analysis and economy all of them to be consistently organised into a probabilistic framework As the output of this research was dispersed into a multitude of technical papers fib Commission 7 thought it worthwhile to select the essential aspects of this large body of knowledge and to present them into a coherent and accessible document for structural engineers To this end a task group of specialists was formed whose qualifications come from their personal involvement in the above mentioned developments throughout this period of time From its inception the group decided that the bulletin should have had a distinct educational character and provide a clear overview of the methods available The outcome is a compact volume that starts by introducing the concepts and definitions of performance based engineering continues with two chapters on assessment and design respectively presenting the methods in detail accompanied by illustrative examples and concludes with an appendix with sample programming excerpts for their implementation It is believed that at present fib Bulletin 68 represents a unique compendium on probabilistic performance based seismic design

Quay Walls, Second Edition J.G. de Gijt, M.L. Broeken, 2013-12-02 This new edition of the handbook of Quay Walls provides the reader with essential knowledge for the planning design execution and maintenance of quay walls as well as general information about historical developments and lessons learned from the observation of ports in various countries Technical chapters are followed by a detailed calculation of a quay wall based on a semi probabilistic design procedure which applies the theory presented earlier Since the publication of the Dutch edition in 2003 and the English version in 2005 considerable new experience has been obtained by the many practitioners using the book prompting the update of this handbook Moreover the introduction of the Eurocodes in 2012 has prompted a complete revision of the Design chapter which is now compliant with the Eurocodes Furthermore additional recommendations for using FEM analysis in quay wall design have been included In response to ongoing discussions within the industry about buckling criteria for steel pipe piles a thorough research project was carried out on steel pipe piles filled with sand and on piles without sand The results of this research programme have also been incorporated in this new version Finally the section on corrosion has been updated to reflect the latest knowledge and attention has been given to the latest global developments in quay wall engineering The new edition was made possible thanks to the contributions of numerous experts from the Netherlands and Belgium
