whose gradients are measured such as gravity field and ambient magnetic field EM gradiometers do require a primary EM field pulsed or sinusoidal which propagates through media and creates a secondary EM field The latter one contains information about the non uniformness of electromagnetically active media such as conductivity and magnetic permeability contrasts These anomalies are the boundaries of mineral deposits oil and gas traps underground water reserves buried artifacts unexploded ordnance UXO nuclear submarines and even cancerous human tissue This book provides readers with a comprehensive introduction history potential applications and current developments in relation to some of the most advanced technologies in the 21st Century Most of the developments are strictly controlled by Defence Export Control rules and regulations introduced in all developed countries that typically require permission to transfer relevant information from one country to another The book is based on the materials that have been available in public domain such as scientific journals conferences extended abstracts and online presentations In addition medical applications of EM gradiometers are exempt from any control and some new results relevant to breast cancer early detection research are published in this book for the first time
