Perspectives on Arabic Linguistics XXX Amel Khalfaoui, Matthew A. Tucker, 2019-07-15 This volume contains selected papers from the Thirtieth Annual Symposium on Arabic Linguistics that was held at Stony Brook University in 2016 as well as two articles that are based on papers presented at the Thirty First Annual Symposium on Arabic Linguistics held at the University of Oklahoma in 2017 The chapters are theoretical and experimental explorations of a variety of linguistic topics and engage ideas ranging over three broad areas of research phonetics and phonology syntax and experimental and computational linguistics They deal with Classical and Modern Standard Arabic as well as a variety of dialects including Iraqi Egyptian Moroccan and Syrian Arabic [The Intonational Phonology of Swabian and Upper Saxon](#) Frank Kügler, 2011-07-11 The study employs an autosegmental metrical model of intonation to propose an intonational grammar of Swabian and Upper Saxon German respectively The analysis is guided by the assumption that each dialect exhibits a specific distinct intonation The phonological analysis is comparative in nature the implementation of accents are compared between the dialects in terms of tonal alignment and excursion In fact the phonetic data present evidence for the phonological analysis in that the individual tonal categories differ significantly from each other In addition a functional analysis of the intonation contours provides further evidence for the phonological analysis Based on the assumption that nuclear contours convey intonational meaning these meanings are analysed and compared A certain meaning can be attributed to intonation contours that differ phonologically between the two dialects However the general shape of contours and its association with meaning has been proved to be identical in the two dialects and compared to a similar analysis of intonational meaning of British English This

comprehensive study of dialect intonation contributes to improve our understanding of intonational phonology **A model of sonority based on pitch intelligibility** Aviad Albert, 2023-06-10 Sonority is a central notion in phonetics and phonology and it is essential for generalizations related to syllabic organization However to date there is no clear consensus on the phonetic basis of sonority neither in perception nor in production The widely used Sonority Sequencing Principle SSP represents the speech signal as a sequence of discrete units where phonological processes are modeled as symbol manipulating rules that lack a temporal dimension and are devoid of inherent links to perceptual motoric or cognitive processes The current work aims to change this by outlining a novel approach for the extraction of continuous entities from acoustic space in order to model dynamic aspects of phonological perception It is used here to advance a functional understanding of sonority as a universal aspect of prosody that requires pitch bearing syllables as the building blocks of speech This book argues that sonority is best understood as a measurement of pitch intelligibility in perception which is closely linked to periodic energy in acoustics It presents a novel principle for sonority based determinations of well formedness the Nucleus Attraction Principle NAP Two complementary NAP models independently account for symbolic and continuous representations and they mostly outperform SSP based models demonstrated here with experimental perception studies and with a corpus study of Modern Hebrew nouns This work also includes a description of ProPer Prosodic Analysis with Periodic Energy The ProPer toolbox further exploits the proposal that periodic energy reflects sonority in order to cover major topics in prosodic research such as prominence intonation and speech rate The book is finally concluded with brief discussions on selected topics i the phonotactic division of labor with respect to s stop clusters ii the debate about the universality of sonority and iii the fate of the classic phonetics phonology dichotomy as it relates to continuity and dynamics in phonology *Appositive Relative Clauses in English* Rudy Loock, 2010 This book sheds new light on Appositive Relative Clauses ARCs a structure that is generally studied from a merely syntactic point of view in opposition to Determinative or Restrictive Relative Clauses DRCs In this volume ARCs are examined from a discourse pragmatic point of view independently of DRCs in order to provide a positive definition of the structure After a presentation of the morphosyntactic semantic and pragmatic characteristics of ARCs a taxonomy of their functions in discourse is established for both written and spoken English based on the results of a corpus based investigation Constraints are then defined within an information packaging approach to syntactic structures to show why speakers choose ARCs over other competing allostructures i e syntactic structures that fulfil similar discourse functions e g nominal appositives independent clauses adverbials noun premodifiers topicalization The end result is a deeper understanding of the richness of ARCs in their natural contexts of use

Proceedings from the Main Session of the Chicago Linguistic Society's ... Meeting Chicago Linguistic Society. Meeting, 2002 *Pronouns, Prosody, and the Discourse Anaphora Weighting Approach* Jennifer Elaine Balogh, 2003 **Journal of Linguistics**, 2016 **Language in Flux** Robin Cooper, Ruth M. Kempson, 2008 The papers in this collection

present a view of language as an evolving system within which flexibility is systemic and subject to progressive change driven by pressures of every day coordinative action as in conversational dialogue As these papers demonstrate these pressures provide a force for variation hence for adaptation and change Topics covered include formal and game theoretical models of evolution diachronic studies of change semantic syntactic lexical and the role of dialogue factors in promoting such change psycholinguistic experimental methods probing the nature of coordination in both language and non language based interaction formal modelling of dialogue and probabilistic studies of language variation Authors include highly influential researchers Joan Bresnan Devyani Sharma and Ashwini Deo Robin Cooper and Arne Ranta Ronnie Cann and Ruth Kempson Miriam Bouzouita Jonathan Ginzburg and Zoran Macura Patrick Healey Gerhard Jaeger Simon Kirby Hannah Cornish and Kenny Smith Staffan Larson Elizabeth Traugott Together these papers present a cross disciplinary synergy reflecting the view that human linguistic behaviour is essentially coordinative and within this general perspective that language is a system of intrinsic flexibility hence perpetually in a state of flux This view involves a radical shift in assumptions away from the traditional view that language competence is a static system relative to which the dynamics of language performance has to be defined and each paper in its own way explores what is involved in modifying such a clear cut division

The Origin of Consciousness in the Social World Charles Whitehead,2008 Western individualism has delayed scientific recognition of the essentially social nature of consciousness or at least of the human mind and brain This book demonstrates that the origin of consciousness needs to be understood in a social context

Asian and Pacific Migration Journal ,2005

The Intonation of Givenness Stefan Baumann,2006 This book addresses students and researchers of both phonetics and phonology and the semantics and pragmatics of discourse It employs an autosegmental metrical model of intonation to investigate the marking of aspects of information structure concentrating on the Given New dimension It begins with an overview of the state of the art in the areas of intonation and information structure and since the term Givenness has been used in the literature in diverging ways provides a model of Givenness proper focussing on the cognitive states of discourse referents and how these states are expressed through the choice of words and their prosody The empirical evidence provided here is based on German It comprises the analysis of a read corpus and two perception experiments which show that the dichotomy of accented versus unaccented corresponding to New versus Given information is inadequate In fact there is evidence that a range of pitch accent types including deaccentuation can be mapped onto the gradient scale of Givenness degrees with the pitch height on the accented syllable being the determining factor
