*Philip's Stargazing with Binoculars* Robin Scagell, David Frydman, 2007 This is a brand new title for Philip's bestselling astronomy list following the success of Philip's *Guide to Stargazing with a Telescope*. Binoculars provide a great start in astronomy. Compared with telescopes they are comparatively cheap and easy to use they are light and compact and can be used for many other activities such as bird watching. But when you are out there on a starry night how do you know what to look at? Where are the best objects to observe through binoculars? Just how much can you see and what are the tips and tricks of getting the most out of them? Philip's *Stargazing with Binoculars* reveals what to expect from a pair of binoculars and how to choose the right ones if you are buying for the first time or up grading. It gives straightforward explanations of how they work and how to progress from first time user to hobby observer. It gives practical help for setting up and using any binoculars and provides lists of objects to look at with different sizes of binoculars from both town and country including the Sun Moon

planets comets asteroids stars clusters variable stars double stars novae nebulae and galaxies Aimed principally at newcomers to astronomy of all ages who would like to begin observing for themselves and perhaps make contact with other amateur observers Philip s Stargazing with Binoculars describes a wide range of binoculars that are internationally available with examples of objects to observe taken from both northern and southern hemispheres The guidance given is appropriate for all observing conditions This brand new title includes a glossary of technical terms and an index making it even easier for the beginner to use and understand It is a practical guide to binoculars and how to achieve the best results It is fully updated to include the latest equipment on the market It is full colour throughout What if boxes suggest simple solutions to difficulties There are specially commissioned step by step illustrations and easy to use star maps covering the whole sky **Stargazing for EVERYONE with Binoculars** Greg Babcock,2014 This Book introduces everyone to the joys of Observational Astronomy with ust the use of Binoculars Exploring the Night Sky with Binoculars Patrick Moore,1986 This book describes bow the owner of binoculars can use them for astronomical observation A full description of the binocular sky is given with details of all the most interesting objects On a clear dark night with a myriad stars shining down the jewelled beauty and the unimaginable immensity of our universe is awe inspiring Some people make the investment that is required to buy a telescope but for many others stargazing through binoculars can be just as rewarding and may lead to a deep interest and lifelong hobby Patrick Moore has painstakingly researched this book to cater for such people He carefully explains the rudiments of astronomy and the selection of suitable binoculars before discussing in more detail the array of beautiful astronomical objects that await the binocular observer stars clusters nebulae and galaxies The night sky that is seen by observers in both northern and southern hemispheres is charted season by season before a detailed presentation is made with maps of all the constellations The use of binoculars for observing the sun the Moon the planets comets and shooting stars is then described The illustrations throughout have been prepared by the artist Paul Doherty working in close collaboration with the author
