**Biosynthesis in *Alexandrium fundyense* (Dinophyceae)** Gaspar Taroncher Oldenburg, 1998 Marine dinoflagellates in the genus *Alexandrium* synthesize Saxitoxin STX and several of its derivatives The aim of this thesis was to analyze novel aspects of toxigenesis and the cell cycle in *Alexandrium* and to apply molecular techniques to gain new insights on the regulation of STX biosynthesis Synchronized cultures of *A. fundyense* were studied to determine the dynamics of toxin production throughout the cell cycle STX biosynthesis was shown to be discontinuous and constrained to approximately 10 hours at the beginning of G1 Two cell cycle transition points were identified a light dependent one and a size dependent one Semi continuous cultures of *A. fundyense* were used to determine the effects of temperature and phosphate limitation on the coupling of STX biosynthesis to O<sub>2</sub> Inferred toxin production rates were constant and correlated to G1 over a range of growth rates The effects of phosphate on STX biosynthesis were analyzed and a scheme of interconversions among STX derivatives is proposed Differential Display DD analysis was applied to the identification of up or downregulated genes during toxigenesis in *A. fundyense* The expression patterns of S adenosylhomocysteine hydrolase methionine aminopeptidase and a histone like protein were related to periods of STX biosynthesis Molecular Phylogenetics and Ultrastructure of Pivotal Protist Flagellates Eunsoo Kim, 2006 **Introduction to Biology** Alan Axelrod, 1999 A complete guide with questions answers and practice tests in the field of biology **Fundamentals of Microbiology** Jeffrey C. Rogers, Nadine M. Johnston, Eugene J. Murphy, Andrew Clarke, 2012-03-12 Since its discovery Antarctica has held a deep fascination for biologists Extreme environmental conditions seasonality and isolation have led to some of the most striking examples of natural selection and adaptation on Earth Paradoxically some of these adaptations may pose constraints on the ability of the Antarctic biota to respond to climate change Parts of Antarctica are showing some of the largest changes in temperature and other environmental conditions in the world In this volume published in association with the Royal Society leading polar scientists present a synthesis of the latest research on the biological systems in Antarctica covering organisms from microbes to vertebrate higher predators This book comes at a time when new technologies and approaches allow the implications of climate change and other direct human impacts on Antarctica to be viewed at a range of scales across entire regions whole ecosystems and down to the level of species and variation within their genomes Chapters address both Antarctic terrestrial and marine ecosystems and the scientific and management challenges of the future are explored
