## Year Of The Hare:

**The Year of the Hare** Arto Paasilinna, 2010-12-28 An internationally bestselling comic novel in which a man with the help of a bunny suddenly realizes what's important in life. Escapism at its best. Just pure fun. NPR.org Which of us has not had that wonderfully seditious idea to play hooky for a while from life as we know it? With these words from his foreword Pico Iyer puts his finger on the exhilaratingly anarchic appeal of *The Year of the Hare*, a novel in the bestselling tradition of *Watership Down*, *Jonathan Livingston Seagull*, and *Life of Pi*. While out on assignment, a journalist hits a hare with his car. This small incident becomes life-changing; he decides to quit his job, leave his wife, sell his possessions, and spend a year wandering the wilds of Finland with the bunny as his boon companion. What ensues is a series of comic misadventures as everywhere they go, whether chased up a tree by dogs or to a formal state dinner or in pursuit of a bear across the Finnish border with Russia, they leave mayhem and laughter in their wake. *The Year of the Hare* Arto Paasilinna, Herbert Lomas, 1995 The wacky satirical adventures of a journalist and his rabbit friend. *The Chinese Recorder and Missionary Journal*, 1877

**Ecological Time Series** Thomas M. Powell, John H. Steele, 2012-12-06 This book results from a summer school held at Cornell University in 1992. The participants were graduate students and postdoctoral researchers selected from a broad range of interests and backgrounds in ecological studies. The summer school was the second in a continuing series whose underlying aim and the aim of this volume is to bring together the different methods and concepts underpinning terrestrial, freshwater, and marine ecology. The first volume in the series focused on patch dynamics in these three ecological sectors. Here we have endeavored to complement that volume by extending its comparative approach to the consideration of ecological time series. The types of data and the methods of collection are necessarily very different in these contrasting environments, yet the underlying concept and the technical problems of analysis have much in common. It proved to be of great interest and value to the summer school participants to see the differences and then work through to an appreciation of the generalizable concepts. We believe that such an approach must have value as well for a much larger audience, and we have structured this volume to provide a comparable reading experience. *The English Reports: Chancery (including collateral reports) (1557-1865)*, 1904 **Indian Antiquary**, 1887 At a time when each Society had its own medium of propagation of its researches in the form of Transactions, Proceedings, Journals, etc., a need was strongly felt for bringing out a journal devoted exclusively to the study and advancement of Indian culture in all its aspects. This encouraged Jas. Burgess to launch the *Indian Antiquary* in 1872. The scope was, in his own words, as wide as possible, incorporating manners and customs, arts, mythology, feasts, festivals, and rites, antiquities, and the history of India. Another laudable aim was to present the abstracts of the most recent researches of scholars in India and the West. *Indian Antiquary* also dealt with local legends, folklore, proverbs, etc. In short, *Indian Antiquary* was entirely devoted to the study of MAN, the Indian, in all spheres. Introduction to facsimile volumes published 1985. *Calculus for the Life Sciences: A Modeling Approach* James L.

Cornette, Ralph A. Ackerman, 2019-05-25 Calculus for the Life Sciences is an entire reimagining of the standard calculus sequence with the needs of life science students as the fundamental organizing principle Those needs according to the National Academy of Science include the mathematical concepts of change modeling equilibria and stability structure of a system interactions among components data and measurement visualization and algorithms This book addresses in a deep and significant way every concept on that list The book begins with a primer on modeling in the biological realm and biological modeling is the theme and frame for the entire book The authors build models of bacterial growth light penetration through a column of water and dynamics of a colony of mold in the first few pages In each case there is actual data that needs fitting In the case of the mold colony that data is a set of photographs of the colony growing on a ruled sheet of graph paper and the students need to make their own approximations Fundamental questions about the nature of mathematical modeling trying to approximate a real world phenomenon with an equation are all laid out for the students to wrestle with The authors have produced a beautifully written introduction to the uses of mathematics in the life sciences The exposition is crystalline the problems are overwhelmingly from biology and interesting and rich and the emphasis on modeling is pervasive An instructor s manual for this title is available electronically to those instructors who have adopted the textbook for classroom use Please send email to textbooks\_ams\_org for more information Online question content and interactive step by step tutorials are available for this title in WebAssign WebAssign is a leading provider of online instructional tools for both faculty and students

**Dynamics of the Boreal Forest : The Kluane Project** Vancouver Charles J. Krebs Professor of Zoology University of British Columbia, Edmonton Stan Boutin Professor of Zoology University of Alberta, Rudy Boonstra Professor of Physiology and Zoology University of Toronto, 2001-03-31 The boreal forest is one of the world s great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world s closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada s leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9 10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest Ecosystem Dynamics of the Boreal Forest The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth

and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there
