Intelligent Capital: Building Self-Governing Financial Architectures in the Cloud Era Vijaya Rama Raju Gottimukkala,2026-02-10 We are entering an age where capital is no longer merely accumulated it is architected Money used to sit in vaults accounts and portfolios waiting for human instruction Today it lives in code flows through networks reacts to data and increasingly makes decisions without asking permission first The cloud did not just change where software runs it changed how value itself behaves This book explores a simple but radical idea financial systems can be designed to govern themselves For centuries finance has depended on layers of human coordination bankers regulators analysts brokers and institutions acting as the nervous system of capital But cloud infrastructure artificial intelligence and programmable financial primitives are dissolving those layers Capital can now be embedded with logic policy and adaptive behavior It can assess risk in real time allocate resources dynamically enforce compliance automatically and evolve based on environmental signals This shift is not merely technological It is architectural When financial structures become software defined they inherit the

properties of modern systems scalability modularity automation and resilience But they also inherit new vulnerabilities governance questions and ethical tensions Who is responsible when autonomous capital acts How do we encode trust What does regulation mean when systems operate across jurisdictions at machine speed Intelligent Capital is not a prediction of a distant future It is a map of a transition already underway from human operated finance to self governing financial architectures The goal of this book is not to celebrate automation nor to resist it but to understand it deeply enough to design it wisely Because in the cloud era the most powerful financial institution may no longer be an organization **Applied Intelligent Decision Making in Machine Learning** Himansu Das,Jitendra Kumar Rout,Suresh Chandra Moharana,Nilanjan Dey,2020-11-18 The objective of this edited book is to share the outcomes from various research domains to develop efficient adaptive and intelligent models to handle the challenges related to decision making It incorporates the advances in machine intelligent techniques such as data streaming classification clustering pattern matching feature selection and deep learning in the decision making process for several diversified applications such as agriculture character recognition landslide susceptibility recommendation systems forecasting air quality healthcare exchange rate prediction and image dehazing It also provides a premier interdisciplinary platform for scientists researchers practitioners and educators to share their thoughts in the context of recent innovations trends developments practical challenges and advancements in the field of data mining machine learning soft computing and decision science It also focuses on the usefulness of applied intelligent techniques in the decision making process in several aspects To address these objectives this edited book includes a dozen chapters contributed by authors from around the globe The authors attempt to solve these complex problems using several intelligent machine learning techniques This allows researchers to understand the mechanism needed to harness the decision making process using machine learning techniques for their own respective endeavors *Treatise on Process Metallurgy* Seshadri Seetharaman,Alexander McLean,Roderick Guthrie,Sridhar Seetharaman,2025-06-09 Treatise on Process Metallurgy Volume 5 Energy Environment and Future Aspects of Process Metallurgy Second Edition is divided into two parts with the first covering sustainable development as it pertains to process metallurgy addressing issues arising from sustained economic growth long term mineral and metal supply and energy requirements in metallurgical industries It also examines energy resources including fossil and renewable sources and discusses the resource efficiency of the circular economy through simulation based analyses The second part delves into the future of metals production globally with a focus on raw material and energy availability It presents current CO_2 emissions and future projections with emphasis on reducing CO_2 generation in steelmaking technologies Additional topics discussed include flash smelting FINEX process outlook the rotary hearth furnace and an extensive coverage of hydrogen steelmaking Covers sustainable development of metals insight on their current and forecast supply and demand emissions reduction and use of energy in the metallurgical industry and more Features simulation based analysis of the resource efficiency of the circular economy and the enabling role of metallurgical
