Applications of Digital Signal Processing to Audio and Acoustics Mark Kahrs, Karlheinz Brandenburg, 2005-12-11
Karlheinz Brandenburg and Mark Kahrs With the advent of multimedia digital signal processing DSP of sound has emerged from the shadow of bandwidth limited speech processing Today the main applications of audio DSP are high quality audio coding and the digital generation and manipulation of music signals They share common research topics including perceptual measurement techniques and analysis synthesis methods Smaller but nonetheless very important topics are hearing aids using signal processing technology and hardware architectures for digital signal processing of audio In all these areas the last decade has seen a significant amount of application oriented research The topics covered here coincide with the topics covered in the biannual workshop on Applications of Signal Processing to Audio and Acoustics This event is sponsored by the IEEE Signal Processing Society Technical Committee on Audio and Electroacoustics and takes place at Mohonk Mountain House in New Paltz New York A short overview of each chapter will illustrate the wide variety of technical material presented in the chapters of this book John Beerends Perceptual Measurement Techniques The advent of perceptual measurement techniques is a byproduct of the advent of digital coding for both speech and high quality audio signals Traditional measurement schemes are bad estimates for the subjective quality after digital coding decoding Listening tests are subject to statistical uncertainties and the basic question of repeatability in a different environment

Applications of Digital Signal Processing to Audio and Acoustics Mark Kahrs, Karlheinz Brandenburg, 1998-03-31 With the advent of multimedia digital signal processing DSP of sound has emerged from the shadow of bandwidth limited speech processing to become a research field of its own To date most research in DSP applied to sound has been concentrated on speech which is bandwidth limited to about 4 kilohertz Speech processing is also limited by the low fidelity typically expected in the telephone network Today the main applications of audio DSP are high quality audio coding and the digital generation and manipulation of music signals They share common research topics including perceptual measurement techniques and analysis synthesis methods Additional important topics are hearing aids using signal processing technology and hardware architectures for digital signal processing of audio In all these areas the last decade has seen a significant amount of application oriented research The frequency range of wideband audio has an upper limit of 20 kilohertz and the resulting difference in frequency range and Signal to Noise Ratio SNR due to sample size must be taken into account when designing DSP algorithms There are whole classes of algorithms that the speech community is not interested in pursuing or using These algorithms and techniques are revealed in this book This book is suitable for advanced level courses and serves as a valuable reference for researchers in the field Interested and informed engineers will also find the book useful in their work

Digital Signal Processing in Audio and Acoustical Engineering Francis F. Li, Trevor J. Cox, 2019-04-02 Starting with essential maths fundamentals of signals and systems and classical concepts of DSP this book presents from an application

oriented perspective modern concepts and methods of DSP including machine learning for audio acoustics and engineering Content highlights include but are not limited to room acoustic parameter measurements filter design codecs machine learning for audio pattern recognition and machine audition spatial audio array technologies and hearing aids Some research outcomes are fed into book as worked examples As a research informed text the book attempts to present DSP and machine learning from a new and more relevant angle to acousticians and audio engineers Some MATLAB codes or frameworks of algorithms are given as downloads available on the CRC Press website Suggested exploration and mini project ideas are given for proof of concept type of exercises and directions for further study and investigation The book is intended for researchers professionals and senior year students in the field of audio acoustics
