Handbook of Intelligent Control David A. White, Donald A. Sofge, 1992 This handbook shows the reader how to develop neural networks and apply them to various engineering control problems Based on a workshop on aerospace applications this tutorial covers integration of neural networks with existing control architectures as well as new neurocontrol architectures in nonlinear control

Differential Equation Models Martin Braun, Courtney S. Coleman, Donald A. Drew, 1983-01-11 The purpose of this four volume series is to make available for college teachers and students samples of important and realistic applications of mathematics which can be covered in undergraduate programs The goal is to provide illustrations of how modern mathematics is actually employed to solve relevant contemporary problems Although these independent chapters were prepared primarily for teachers in the general mathematical sciences they should prove valuable to students teachers and research scientists in many of the fields of application as well Prerequisites for each chapter and suggestions for the teacher are provided Several of these chapters have been tested in a variety of classroom settings and all have undergone extensive peer review and revision Illustrations and exercises are included in most chapters Some units can be covered in one class whereas others provide sufficient material for a few weeks of class time Volume 1 contains 23 chapters and deals with differential equations and in the last four chapters problems leading to partial differential equations Applications are taken from medicine biology traffic systems and several other fields The 14 chapters in Volume 2 are devoted mostly to problems arising in political science but they also address questions appearing in sociology and ecology Topics covered include voting systems weighted voting proportional representation coalitional values and committees The 14 chapters in Volume 3 emphasize discrete mathematical methods such as those which arise in graph theory combinatorics and networks

Integration and Testing of a Multistack Automated Cone Machine Young-Chul Lee, Wilderich A. White, Stephen A. Velinsky, 2004. The Advanced Highway Maintenance and Construction Technology AHMCT Research Center has been developing robotic equipment and machinery for highway maintenance and construction operations. It is a cooperative venture between the University of California at Davis and the California Department of Transportation Caltrans. The research and development projects have the goal of increasing safety and efficiency of roadwork operations through the appropriate application of automation solutions. This report describes the continuing development of automated equipment for deploying and retrieving traffic cones. In this latest phase of the project, the center has continued the development of the automated cone machine (ACM) through further testing and development of the first generation integrated prototype ACM and the design and fabrication of an integrated Multi stack ACM developed to maximize the number of cones carried by the automated cone machine. Included in this report is the development of an improved control system for the retrieval arm, which is a critical component used to pick up the traffic cone off the road. A first generation ACM prototype ACM 1 is being used in tests and demonstrations on the highways of California. Operators using ACM 1 can place

and retrieve cones without any set up and control the machine from within the confines of the cab These machines can easily be run by a single operator and are very compatible with the process of closing a lane The ACM 1 design was integrated into the existing Caltrans manual cone body truck and was limited to two stacks of 40 cones each The new ACM multistack is designed to carry six stacks of 50 cones for a total of 300 cones These machines are unambiguous demonstrations of the successful application of automation in a very demanding environment This development work and the continued support of commercialization at AHMCT support the Caltrans goal of making these machines available to the maintenance operations
