practical applications for the solutions of real life problems and will be of interest to graduate level students educators researchers and scientists interested in mathematical modelling and its diverse applications Features Presents several recent developments in the theory and applications of fractional calculus Includes chapters on different analytical and numerical methods dedicated to several mathematical equations Develops methods for the mathematical models which are governed by fractional differential equations Provides methods for models in physics engineering signal processing fluid mechanics and bioengineering Discusses real world problems theory and applications Finite Extinction Time for Non-Linear Absorption-Diffusion Equations Jacob B. Goldberg,2002-09 In this thesis we develop a numerical method in order to approximate the solutions of one dimensional non linear absorption diffusion equations We test our method for accuracy against a linear diffusion equation with a solution that can be written in closed form We then test various types of diffusion and absorption terms to determine which ones produce extinction in finite time We also develop a numerical method to computationally solve diffusion free equations We compare the numerical solutions of the one dimensional non linear absorption diffusion equation and the diffusion free equation and we find that for the cases tested the numerical absorption diffusion solutions are always less than the numerical diffusion free solutions Furthermore we find this is true for the cases tested when there is finite and infinite extinction time We also look at the open problem where we have slow diffusion and weak absorption but their combined effect is strong Our results provide some insight into the answer of this problem
