Russell, Shauna Wilson, 2013-01-15 The purpose of this book is to provide hands-on guidelines for using electronic communication tools as part of the auditing process. The pros and cons of conducting e-audits and their consequences will be reviewed. There are situations when e-auditing techniques are more efficient and other times they may be less efficient and even lead to questionable audit report conclusions. In this book we provide proven techniques for conducting remote audits, e-audits, and explore e-auditing practices to help organizations make informed decisions regarding their use. A ten-point e-audit program implementation checklist is included with the book. Combined, the two authors have over 20 years experience conducting remote audits and using virtual communication technologies. **ASQ Auditing Handbook** J.P. Russell, 2012 [The ASQ Auditing Handbook](#) James R. Russell, 2010 *Failure Mode and Effects Analysis (FMEA) for Small Business Owners and Non-Engineers* Marcia M. Weeden, 2015-11-28 This book is intended for small business owners and non-engineers such as researchers, business analysts, project managers, small non-profits, community groups, religious organizations, and others who want an assessment tool that can provide methods for identifying the areas or actions that may be at risk for failure, ranking the risks that they may be facing, and determining the degree of threat being faced. While an FMEA is a tool of reliability engineering, this book sidesteps the complex approach that reliability engineering can take; therefore, it does not cover all aspects and applications of an FMEA. This book provides sufficient information about FMEAs without requiring the expertise of an engineer or statistical analyst to establish specifications and for making cost-effective informed decisions. FMEAs are valuable for developing policies and standard operating procedures (SOPs), developing system design and process requirements that eliminate or minimize the likelihood of failures, developing designs, methods, and test systems to ensure that errors or failures are automatically corrected, errors or failures are flagged for correction, the potential for errors or failures have been eliminated, or risks are reduced to acceptable levels, developing and evaluating diagnostic systems, and helping with design choices, trade-off analysis.
