**The Paradoxical Foundation of Strategic Management** Andreas Rasche, 2007-10-25 This book offers a systematic critique of the scientific discourse of strategic management. It uncovers scholars' unquestioned assumptions and shows that by upholding these assumptions, researchers obscure the paradoxical nature of strategic reasoning. To uncover the paradoxes of strategic management, the author refers to the philosophy of Jacques Derrida. He exposes the paradoxes that inevitably occur when theorizing about corporate strategy along the dimensions strategy context process and content and shows how these paradoxes can enrich future thinking about strategic problems. The analysis is completed by a discussion of theoretical and practical implications which highlight the need to research strategy not as something an organization has but as something an organization does. Such a practice perspective gives reference to the paradoxical ground that strategic management rests on and enriches scholars' ability to reflect on practitioners' tasks while doing strategy in organizations.

University of Hannover Personal und Arbeit course International Management language English abstract How and why do  
organizations change These questions have been an enduring and central quest of management scholars and many other  
disciplines To find answers concerning these questions it is indisputable that executives need to develop strategies in order  
to reach their goals and successfully respond and adapt to the environment while facing change Or as Ocasio 1997 put it  
explaining how firms behave is one of the fundamen tal issues or questions that define the field of strategy and the  
contribution it makes to the theory and practice of management When companies are faced with environmental or internal  
changes some organizations start changing their strategies and others do not Accordingly in this paper we will view strategic  
change as the firm s alignment with its external environment and with internal organizational issues Hence the starting point  
for why organizations take action concerns the environment within which the company operates Over the past decades

managers and scholars assumed that the environment needed to be assessed observed and enacted in order to gain information process this information and to formulate a strategy to reach future goals and push the firm s overall performance The most popular assumptions within the strategy formulation literature are that the appropriateness of a firm s strategy can be defined in terms of its fit match or congruence with the environmental or organizational contingencies facing the firm Thus the environment inhibits global competitive pressure dynamics and uncertainty because of the current ongoing internationalization of firms and their willingness and need to expand and invest in emergent markets in order to survive gain profits The ongoing revolution and upcoming research stream called Industry 4 0 which is highlighting the importance for and the influence of the internet e g the Internet of Things on firms is just one of the examples that shows how firms have to cope with and adapt to the complex environments Since for example the internet improves the information gathering process concerning environmental and internal organizational issues the actual scarce resource within the firm becomes the managers amount of attention that they allocate to searching for sorting through and interpreting the available information
