Tactical Missile Warheads Joseph Carleone, 1993 By marrying warhead fundamentals with more modern design approaches this book will assist new members of the warhead community to learn more rapidly as well as provide a reference text for those working actively in the field The books chapters are each self contained articles however the topics are linked and may be divided into three groups The first group provides a broad introduction as well as four fundamental technology areas namely explosives dynamic characterization of materials explosive metal interaction physics and hydrocodes The second group presents the mechanics of three major types of warheads shaped charges explosively formed projectiles and fragmentation warheads The interaction with various types of targets is also presented The third group addresses test methodology Flash radiography and high speed photography are covered extensively especially from an applications point of view Special methods are also presented including the use of tomographic reconstruction of flash

radiographs and the use of laser interferometry The book is intended for warhead designers as well as engineering managers and project managers who manage warhead munitions and missile development projects

Conventional Warhead Systems Physics and Engineering Design Richard M. Lloyd, 1998 This is the first book written that discusses the physics of designing warheads against ballistic missiles In his exploration of the mathematical equations and logic behind antiballistic missiles ATBMs warhead design Lloyd takes an in depth look at warhead design and endgame concepts against ATBMs Hailed as the perfect companion to Tactical Missile Warheads the book demonstrates the system aspects you will need as a systems warhead engineer designing complex tactical and defense warheads under tight budgetary constraints

Conventional Warhead Systems Physics and Engineering Design features a previously unpublished investigation of energy momentum and methods for estimating damage on very complex ballistic missile payloads such as submunitions of chemical and biological nature Direct hit warhead design and fragmentation are comprehensively discussed for the first time in print High strain rate explosives thermodynamics heat transfer chemistry penetration mechanics statistics dynamics and finite element equations are also covered extensively in this single compact volume The book contains over 2000 mathematical equations with more than 500 figures that give today's warhead engineers new ideas and knowledge in warhead design
