Bainbridge, Bruce Tonn, George Whitesides, 2014-01-28 This volume aims to document the most important worldwide accomplishments in converging knowledge and technology including converging platforms methods of convergence societal implications and governance in the last ten years Convergence in knowledge technology and society is the accelerating transformative interaction among seemingly distinct scientific disciplines technologies and communities to achieve mutual compatibility synergism and integration and through this process to create added value for societal benefit It is a movement that is recognized by scientists and thought leaders around the world as having the potential to provide far reaching solutions to many of today s complex knowledge technology and human development challenges Four essential and interdependent convergence platforms of human activity are defined in the first part of this report nanotechnology biotechnology information technology and cognitive science NBIC foundational tools Earth scale environmental systems human scale activities and convergence methods for societal scale activities The report then presents the main implications of convergence for human physical potential cognition and communication productivity and societal outcomes education and physical infrastructure sustainability and innovative and responsible governance As a whole the report presents a new model for convergence To effectively take advantage of this potential a proactive governance approach is suggested The study identifies an international opportunity to develop and apply convergence for technological economic environmental and societal benefits The panel also suggests an opportunity in the United States for implementing a program aimed at focusing disparate R and D energies into a coherent activity a Societal Convergence Initiative This study received input from leading academic industry government and NGO experts from the United States Latin America Europe Asia and Australia

Teaching Science in Elementary and Middle School Joseph S. Krajcik, Charlene Lochbihler Czerniak, 2007 The need for a scientifically literate population that can apply scientific ideas to solve real world problems in the 21st century has never been greater Yet a growing disconnect exists between this need and the educational capacity to prepare them The mission of Teaching Science in Elementary and Middle School A Project Based Approach 3e is to help answer this need Like its predecessors this new edition is organized around the guiding principles of problem based learning long term interdisciplinary student centered lessons that are relevant to real world issues and activities This teaching approach engages all young learners regardless of culture race or gender in exploring important and meaningful questions through a process of investigation and collaboration Throughout this dynamic process students ask questions make predictions design investigations collect and analyze data make products and share ideas Changes in this new edition include the following Stronger more explicit connections between PBS inquiry teaching and the National Science Education Standards NSES The theme of establishing the relevance of science to students lives has been expanded It now includes attention to discrepant events anchoring events and experiencing phenomena in addition to its previous focus on driving questions To help children understand that science is about explaining phenomena a new chapter Making Sense of Data now follows the one on

Designing and Carrying Out Investigations It contains a section on helping children create evidence based scientific explanations A new section on the challenges of special needs and gifted students The discussion of technology in science teaching have been expanded to include such new devices as wireless handhelds cameras cell phones wikis and ipods The introductory scenarios have been reworked to insure greater relevance to elementary science teaching An accompanying Web site will offer test items and strategies to support students in problem solving and in planning and carrying out investigations This text is appropriate for anyone interested in teaching elementary or middle school science using an inquiry oriented problem based framework

An Environmental History of the Civil War Judkin Browning, Timothy Silver, 2020-02-20 This sweeping new history recognizes that the Civil War was not just a military conflict but also a moment of profound transformation in Americans relationship to the natural world To be sure environmental factors such as topography and weather powerfully shaped the outcomes of battles and campaigns and the war could not have been fought without the horses cattle and other animals that were essential to both armies But here Judkin Browning and Timothy Silver weave a far richer story combining military and environmental history to forge a comprehensive new narrative of the war s significance and impact As they reveal the conflict created a new disease environment by fostering the spread of microbes among vulnerable soldiers civilians and animals led to large scale modifications of the landscape across several states sparked new thinking about the human relationship to the natural world and demanded a reckoning with disability and death on an ecological scale And as the guns fell silent the change continued Browning and Silver show how the war influenced the future of weather forecasting veterinary medicine the birth of the conservation movement and the establishment of the first national parks In considering human efforts to find military and political advantage by reshaping the natural world Browning and Silver show not only that the environment influenced the Civil War s outcome but also that the war was a watershed event in the history of the environment itself
