**Notes**  
When multiplying fractions, you will multiply the numerators together and multiply the denominators together.

**Example**  
$$\frac{1}{2} \times \frac{3}{4} = \frac{1 \times 3}{2 \times 4}$$

When dividing fractions, you first must calculate the reciprocal of the dividing fraction and then multiply the numerators together and multiply the denominators together.

**Example**

|                                |                   |                                  |
|--------------------------------|-------------------|----------------------------------|
| $\frac{1}{4} \div \frac{4}{5}$ | $\longrightarrow$ | $\frac{1}{4} \times \frac{5}{4}$ |
|                                |                   | $\times$                         |
|                                |                   | $\frac{5}{16}$                   |

A proper fraction is a fraction whose numerator is smaller than its denominator.  
An improper fraction is a fraction whose numerator is equal to or greater than its denominator.
