Cloud Infrastructure Review 2017 Computing:

Advanced Computing Techniques for Optimization in Cloud H S Madhusudhan, Punit Gupta, Pradeep Singh Rawat, 2024-09-11 This book focuses on the current trends in research and analysis of virtual machine placement in a cloud data center. It discusses the integration of machine learning models and metaheuristic approaches for placement techniques. Taking into consideration the challenges of energy efficient resource management in cloud data centers, it emphasizes upon computing resources being suitably utilised to serve application workloads in order to reduce energy utilisation while maintaining apt performance. This book provides information on fault tolerant mechanisms in the cloud and provides an outlook on task scheduling techniques. Focuses on virtual machine placement and migration techniques for cloud data centers. Presents the role of machine learning and metaheuristic approaches for optimisation in cloud computing services. Includes application of placement techniques for quality of service performance and reliability improvement. Explores data center resource management, load balancing and orchestration using machine learning techniques. Analyses dynamic and scalable resource scheduling with a focus on resource management. The text is for postgraduate students, professionals and academic researchers working in the fields of computer science and information technology. **Sensors, Cloud, and Fog**

Sudip Misra, Subhadeep Sarkar, Subarna Chatterjee, 2019-06-20 This book provides an in depth understanding of Internet of Things (IoT) technology. It highlights several of today's research and technological challenges of translating the concept of the IoT into a practical, technologically feasible and business viable solution. It introduces two novel technologies: sensor cloud and fog computing as the crucial enablers for the sensing and compute backbone of the IoT. The book discusses these two key enabling technologies of IoT that include a wide range of practical design issues and the futuristic possibilities and directions involving sensor networks and cloud and fog computing environments towards the realization and support of IoT. Classroom presentations and solutions to end of chapter questions are available to instructors who use the book in their classes.

Detection and Mitigation of Insider Attacks in a Cloud Infrastructure: Emerging Research and Opportunities

Gunasekhar, T., Rao, K., Thirupathi, Kiran, P. Sai, Reddy, V., Krishna, Rao, B., Thirumala, 2019-02-15 Businesses constantly face online hacking threats or security breaches in their online mainframe that expose sensitive information to the wrong audience. Companies look to store their data in a separate location, distancing the availability of the information and reducing the risk of data breaches. Modern organizations need to remain vigilant against insider attacks, cloud computing risks and security flaws within their mainframe. *Detection and Mitigation of Insider Attacks in a Cloud Infrastructure: Emerging Research and Opportunities* is an essential reference source that discusses maintaining a secure management of sensitive data and intellectual property and provides a robust security algorithm on consumer data. Featuring research on topics such as public cryptography, security principles and trustworthy computing, this book is ideally designed for IT professionals, business managers, researchers, students and professionals seeking coverage on preventing and detecting the insider attacks.

Internationalisation in the Cloud. An explorative case study into the foreign market expansion of SaaS providers Christina Küppers, 2017-07-17 Master's Thesis from the year 2016 in the

subject Business economics Business Management Corporate Governance grade 1 0 Copenhagen Business School
Department of Intercultural Communication and Management language English abstract This thesis investigates the internationalisation complexities of cloud technology vendors To enhance the understanding of foreign market expansion of cloud providers this study sought to answer the overarching research questions how do cloud providers internationalise and is available literature to date still relevant for cloud technology vendors The researchers utilised a single case study of NN an expanding Danish cloud SME to provide indepth insights for the business literature realm which has so far attracted scarce research Literature has focused almost exclusively on SMEs MNCs and born globals but cloud providers were mostly ignored To date little systematic investigations have considered that the dynamics and processes of internationalisation significantly change in a cloud context The most important contribution is a research model encompassing twelve moderator variables impacting the performance of cloud firms Their suggested influence was drawn from a thorough theoretical analysis of contemporary internationalisation literature from the 1950s to the present day Thereby both versions of the Uppsala Model of Internationalisation by Johanson and Vahlne 1977 2009 were selected as suitable to provide structure for the research model namely the process model and the network model Complementing the four categories of the Uppsala Model the research model was enhanced with two additional categories so as to examine cloud vendor internationalisation Using a sample of five employees who are directly responsible for internationalisation activities of the case company NN this thesis offers interesting insights into the complexities of cloud internationalisation The findings illustrate that internationalisation literature to date is still useful for examining internationalisation performance and in particular the network model However since cloud vendors mainly operate virtually this brings forth many advantages and disadvantages which have previously not been considered Theoretical contributions and implications for future research are discussed This thesis provides support for ten out of twelve items and offers various compelling areas for future research
