WATER

All living things must have water to survive. While people can live without foods for days, even months, we cannot survive without water for more than a few days!

Why is water so important to our bodies?

Water is the main ingredient in the fluids of the bodies' systems. Fluids travel through your body, carrying nutrients and waste to and from all your cells and organs. Water also keeps your joints lubricated.

Water is essential in the digestive process. Starting in the mouth, saliva is made mostly of water, and it helps break down food in the mouth. Then your digestive juices are made mostly of water to keep things moving properly.
