uncertainties with regard to defining the dose to the lung It takes a tangential look at the lung dose by exploring the possibility of obtaining clues from occupational medicine Toxicologically the book examines the possible methodology for exploring how particles and their toxicity can be investigated and looks into the cardio toxic effects of air pollution The effects of pollutant mixtures are compared with those of separate individual pollutants In addition the question of the importance of air acidity is tackled Epidemiologically the book deals with the problems associated with point sources as opposed to diffuse sources of air pollution and considers whether we can quantify the health effects of air pollution adequately These areas though difficult need to be addressed in order to further develop our knowledge of the health effects of air pollution In this volume a strong panel of authors treat the issues They have raised more questions but at the same time succeeded in solving a number of problems
