

SPM Chemistry (Form 5) - Chapter 5: Chemicals for Consumers (Worksheet 01)

Soaps

1. Cleansing agents are chemical substances used to remove **grease** and dirt.
2. There are two types of cleansing agents:
  - a. **Soaps**
  - b. **Detergents**
3. In ancient times, soaps were made from ashes of plants which contain **sodium** carbonate and **potassium** carbonate.
4. The ashes were boiled with lime (calcium oxide) to produce caustic **potash** (potassium hydroxide). Caustic potash is then boiled with animal **fats** to produce soap.
5. In 1816, the French chemist **Michel Chevreul** 米歇尔·谢弗勒尔 (1786 – 1889) discovered that animal fats are composed of **fatty acids** and **glycerol**. This discovery contributed to the rapid development of the soap and candle industry.
6. In 1861, the Belgian chemist **Ernest Solvay** 欧内特斯·索尔维 (1838–1922) discovered the process to make soda (sodium carbonate) from common salt (sodium chloride) and calcium carbonate. This process is known as the **Solvay** Process which produces sodium carbonate which is used for making glass, soaps and detergents.
7. Soaps are sodium or potassium **salts** of long chain fatty acids with **12** to **18** carbon atoms per molecule. The general formula of soap is  **$\text{RCOO}^-\text{Na}^+$**  or  **$\text{RCOO}^-\text{K}^+$** .
8. Soap is produced by the reaction between sodium hydroxide or potassium hydroxide with animal **fats** or vegetable **oils**. This reaction is known as **saponification**. **Saponification** is the alkaline hydrolysis of esters using alkali solutions.
9. Fats and vegetable oils are large, naturally occurring **ester** molecules. When fats or oils are boiled with concentrated alkalis, such as sodium hydroxide or potassium hydroxide, **saponification** occurs and the ester molecules are broken down into **soap** and **glycerol**.
10. The soap produced can be precipitated by adding common salt to the reaction mixture. **Sodium chloride** reduces the solubility of soap in aqueous solution and causes the soap to be precipitated out.
11. The properties of soap depend on:
  - a. the type of **alkali** used for saponification,
    - o Soaps produced from sodium hydroxide are **hard** whereas soaps produced from potassium hydroxide are **soft**.
  - b. the type of **animal fats** or **vegetable oils** used.
    - o Animal fats (**tallow**) from cows and **vegetable** oils (such as palm oil or olive oil) are used for making soap.
12. When a sodium soap is dissolved in water, it will dissociate and produce **sodium** ions and **carboxylate** ions ( $\text{RCOO}^-$ ). For example, **sodium stearate** (soap) dissolves in water to form **sodium** ions and **stearate** ions.
13. The **stearate** ions take part in the removal of dirt but the **sodium** ions do not.
  - a. The stearate ion consists of **two** parts: the '**head**' and the '**tail**'. The '**head**' is **negatively**-charged and the '**tail**' is a long **hydrocarbon** chain.
  - b. The '**head**' contains the  $-\text{COO}^-$  ion which dissolves readily in water (**hydrophilic**) but does not dissolve in oil.
  - c. Conversely, the '**tail**' contains a long hydrocarbon chain which is insoluble in water (**hydrophobic**) but dissolves readily in oil.
14. Soaps made from palmitic acid are known as **sodium palmitate**.

**Principles of Macro-economics** Robert H. Frank, Ben Bernanke, 2004 In recent years innovative texts in mathematics, science, foreign languages, and other fields have achieved dramatic pedagogical gains by abandoning the traditional encyclopedic approach in favor of attempting to teach a short list of core principles in depth Two well-respected writers and researchers, Bob Frank and Ben Bernanke, have shown that the less-is-more approach affords

similar gains in introductory economics Although recent editions of a few other texts have paid lip service to this new approach Frank Bernanke is by far the best thought out and best executed principles text in this mold Avoiding excessive reliance on formal mathematical derivations it presents concepts intuitively through examples drawn from familiar contexts The authors introduce a well articulated short list of core principles and reinforcing them by illustrating and applying each in numerous contexts Students are periodically asked to apply these principles to answer related questions exercises and problems The text also encourages students to become Economic Naturalists people who employ basic economic principles to understand and explain what they observe in the world around them An economic naturalist understands for example that infant safety seats are required in cars but not in airplanes because the marginal cost of space to accommodate these seats is typically zero in cars but often hundreds of dollars in airplanes Such examples engage student interest while teaching them to see each feature of their economic landscape as the reflection of an implicit or explicit cost benefit calculation The Second Edition of Frank Bernanke follows the successful First Edition with several pedagogical improvements Based on reviewer feedback this edition offers 1 even more streamlined coverage of the cost benefit approach in the introductory chapter 2 exercises that are more closely tied to the examples 3 expanded narrative explanations of important principles making them more accessible to average students and 4 expanded coverage of several key topics The result is a revision that is motivating to students an effective text for teaching and an exciting first course in Economics
