SYLLABUS

Description:

Analytics has been defined as the extensive use of data, statistical and quantitative analysis, explanatory and predictive models, and fact-based management to drive decisions and actions. Analytics is more than just analytical methodologies or techniques used in logical analysis. It is a process of transforming data into actions through analysis and insights in the context of organizational decision making and problem solving. Analytics includes a range of activities, including business intelligence, which is comprised of standard and ad hoc reports, queries and alerts, and quantitative methods, including statistical analysis, forecasting/ extrapolation, predictive modeling (such as data mining), optimization and simulation.

Course Materials:

Selected readings and articles – distributed in class and/or posted online.

Software:

Excel and Excel add-ins will be the primary software used throughout the course. Both of the add-ins: XLMiner (available at www.solver.com/xlminer-data-mining) and @Risk (www.palisade.com/trials.asp) are available as free 15 day trial versions.
