Fundamental observations

In the second edition of *Introduction to Cosmology*, Section 2.1 contains a more physically realistic analysis of Olbers' paradox. Instead of treating stars as point light sources, as I did in the first edition, I acknowledge that they are spheres of finite size, and use a mean free path analysis to find the resulting surface brightness of the night sky in an infinite Euclidean universe.

In Section 2.2, I clarify the difference between the Copernican principle and the cosmological principle, which I failed to make clear in the first edition.

Section 2.3 contains a bit more historical background on Hubble's law, placing it in the context of the work by Lemaitre and others. My default value of the Hubble constant, taken to be $H_0 = 70 \pm 7 \text{ km s}^{-1} \text{ Mpc}^{-1}$ in the first edition, is $H_0 = 68 \pm 2 \text{ km s}^{-1} \text{ Mpc}^{-1}$ in the second edition. (Note that although this value of H_0 is consistent with the WMAP 9-year results and the Planck 2015 results, it is lower than values found by direct measurements in the local universe. For instance, Riess et al. (2016) find $H_0 = 73.24 \pm 1.74 \text{ km s}^{-1} \text{ Mpc}^{-1}$. In the textbook, I do not bring up this tension; you may want to use it as a topic of discussion with your students.)

In Section 2.4, I clarify the discussion of the different neutrino mass states, placing upper and lower limits on the sum of the neutrino masses. (These limits reappear in Chapter 11, during the discussion of the difference between hot dark matter and cold dark matter.)

Exercises

2.1 Assume you see a perfect blackbody at a temperature of $T = 310 \text{ K}$.

Introduction To Cosmology Solution Manual:

Student Solutions Manual for Mathematical Methods for Physics and Engineering Kenneth Franklin Riley, Michael Paul Hobson, 2006 The authors present a wide ranging and comprehensive textbook for physical scientists who need to use the tools of mathematics for practical purposes

Student Solutions Manual and Study Guide for Serway and Jewett's Physics for Scientists and Engineers, Sixth Edition John R. Gordon, Ralph V. McGrew, Raymond A. Serway, 2004 Written by John R Gordon Ralph McGrew and Raymond Serway the two volume manual features detailed solutions to 20 percent of the end of chapter problems from the text This manual also features a list of important equations concepts and answers to selected end of chapter questions

Study Guide and Student Solutions Manual Douglas Brandt, 2000 Physics for Scientists and Engineers combines outstanding pedagogy with a clear and direct narrative and applications that draw the reader into the physics The new edition features an unrivaled suite of media and on line resources that enhance the understanding of physics Many new topics have been incorporated such as the Otto cycle lens combinations three phase alternating current and many more New developments and discoveries in physics have been added including the Hubble space telescope age and inflation of the universe and distant planets Modern physics topics are often discussed within the framework of classical physics where appropriate For scientists and engineers who are interested in learning physics
