Solution/Representation - Problem #3

We have eight songs from which we must choose two. From the context of the problem, it is clear that choosing to bring songs #1 and #2 is the same as bringing songs #2 and #1. In other words, the order of the two songs does not matter. We can list the songs and count the different pairs:

We see there are seven pairs that include song #1.

There are six pairs that include song #2 and have not been counted above already.

There are five more pairs that include song #3 and have not been counted anywhere above. Can we see

a pattern? Each time there is one fewer pairing, which leads us to see that the total number of pairings/combinations will be $7 + 6 + 5 + 4 + 3 + 2 + 1 = 28$.

We also can solve this problem using a formula. We are counting the number of possible combinations of two songs when choosing from eight songs. This is called "8 choose 2" and is represented ${}_8C_2$. This is simplified in the following manner:

$$\frac{8!}{2!(8-2)!} = \frac{8!}{2!6!} = \frac{8 \cdot 7 \cdot 6!}{2 \cdot 1 \cdot 6!} = \frac{8 \cdot 7}{2 \cdot 1} = 28.$$

Representation - Problem #7

For this problem, we can draw only vertical and horizontal segments. This limits our segment sizes to 1, 2 and 3 units. We need to count the number of 1 by 1, 2 by 2 and 3 by 3 squares that can be drawn. Rather than drawing each of the squares, we'll indicate with a star where a top, left vertex could be placed. There are nine places for unit squares to be drawn, and the nine possible top, left vertices of these 1 by 1 squares are indicated with stars in Figure 1. There are four places for the 2 by 2 squares to be drawn (Figure 2), and only one place for the 3 by 3 square to be drawn (Figure 3). This 3 by 3 square is placed along the 12 boundary points of the grid. This is a total of $9 + 4 + 1 = 14$ squares.

Figure 1

Figure 2

Figure 3

Notice the stars in Figures 1, 2 and 3 fall in square formations.

This is why the amounts of the different-sized squares are perfect squares: 9, 4 and 1. So if we had a 10 by 10 grid of points, we could quickly deduce that there would be $81 + 64 + 49 + 36 + 25 + 16 + 9 + 4 + 1 = 285$ squares that could be drawn (with the largest square measuring 9 units by 9 units), according to the same restrictions in problem #7.
