

## ELEMENTS OF A GRID

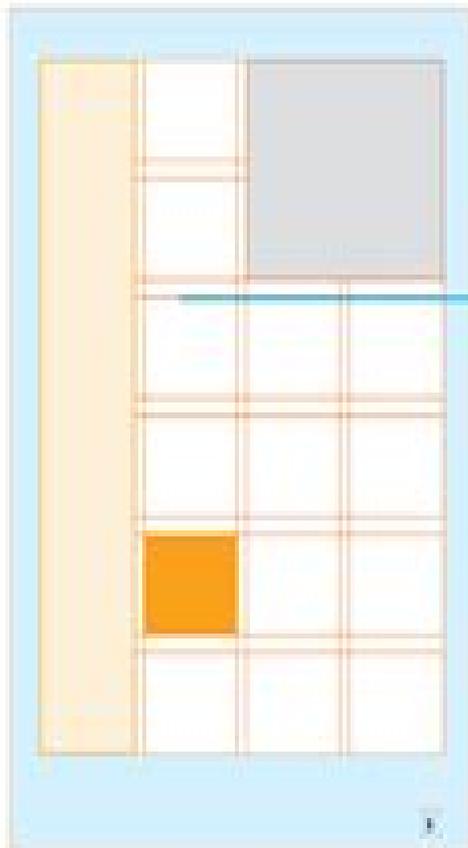

### 1. Know the Components

The main components of a grid are margins, columns, columns, headings, gutters, lines, and baselines. Starting with a page that is four pages wide and four pages high, let us see how margins and columns, how they're made, alignments, and so on.

**MARGINS** are vertical distances that define the space between the text and the edges of the page. The width and number of columns on a page or across the page depend on the content.

**MARGINS** are vertical distances between the content area, providing a breathing, white space. Consistent margins can create interest and ease of reading text.

**MARGINS** are buffer zones. They represent the amount of space between the text and the page content. Margins can also house secondary information, such as notes and captions.

**MARGINS** are groups of margins or spaces that can be used to define space for type, images, or other elements.

**BASELINES** are elements that break space into horizontal bands for what text, images are created for each page and elements to guide a reader across a page.

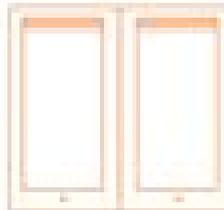

**MARGINS** are a visual example of a document, including elements for content that appear in the text. To allow readers to view page numbers, margins, notes and foot numbers, and so on.

## BASIC GRID DIAGRAMS

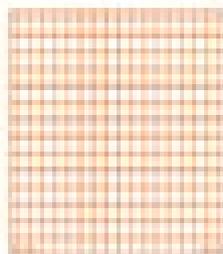

### 2. Learn the Basic Structures

Although the diagrams below show common structures, there are additional variations on the basic configurations. The illustrations guide the designer and they also define layout from columns to the margins.

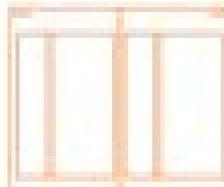

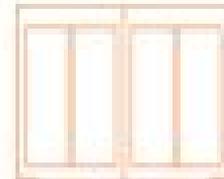

**1 COLUMN GRID** is a primary used for continuous reading text such as novels, reports, or books. The block of text is the main feature on the page, leaving a blank space.

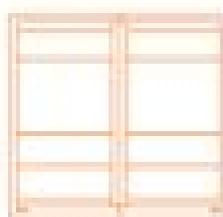

**MARGINS** are used for controlling the look of content. Alternative use is margins, columns, lines, and so on. The margins control and horizontal columns, which control the structure of the content.

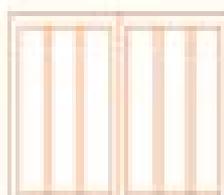

**2 COLUMN GRID** can be used to control a set amount of text within a specific column. A multi-column grid can be created with columns of equal or unequal width, or text placed in one line that aligns with the width of the entire column.

**MARGINS** focus on page left margin. They determine the width of the column, the margins, and the overall layout. To make the layout more interesting, they define the structure of the content.

**MULTI-COLUMN GRID** allows greater flexibility than single or two column grids. Content within columns of varying widths can be used for reports, and so on.
