Global Optimization in Engineering Design Ignacio E. Grossmann, 2013-04-17 Mathematical Programming has been of significant interest and relevance in engineering an area that is very rich in challenging optimization problems In particular many design and operational problems give rise to nonlinear and mixed integer nonlinear optimization problems whose modeling and solution is often nontrivial Furthermore with the increased computational power and development of advanced analysis e.g process simulators finite element packages and modeling systems e.g GAMS AMPL SPEEDUP ASCEND gPROMS the size and complexity of engineering optimization models is rapidly increasing While the application of efficient local solvers nonlinear programming algorithms has become widespread a major limitation is that there is often no guarantee that the solutions that are generated correspond to global optima In some cases finding a local solution might be adequate but in others it might mean incurring a significant cost

penalty or even worse getting an incorrect solution to a physical problem Thus the need for finding global optima in engineering is a very real one It is the purpose of this monograph to present recent developments of tech niques and applications of deterministic approaches to global optimization in engineering The present monograph is heavily represented by chemical engi neers and to a large extent this is no accident The reason is that mathematical programming is an active and vibrant area of research in chemical engineering This trend has existed for about 15 years
