Beckett's Industrial Chocolate Manufacture and Use
Steve T. Beckett, Mark S. Fowler, Gregory R. Ziegler, 2017-02-28 Since the publication of the first edition of Industrial Chocolate Manufacture and Use in 1988 it has become the leading technical book for the industry From the beginning it was

recognised that the complexity of the chocolate industry means that no single person can be an expert in every aspect of it. For example, the academic view of a process such as crystallisation can be very different from that of a tempering machine operator, so some topics have more than one chapter to take this into account. It is also known that the biggest selling chocolate in the USA tastes very different from that in the UK, so the authors in the book were chosen from a wide variety of countries, making the book truly international. Each new edition is a mixture of updates, rewrites, and new topics. In this book, the new subjects include artisan or craft scale production, compound chocolates, and sensory. This book is an essential purchase for all those involved in the manufacture, use, and sale of chocolate-containing products, especially for confectionery and chocolate scientists, engineers, and technologists working both in industry and academia. The new edition also boasts two new co-editors, Mark Fowler and Greg Ziegler, both of whom have contributed chapters to previous editions of the book. Mark Fowler has had a long career at Nestlé UK, working in Cocoa and Chocolate research and development; he is retiring in 2013. Greg Ziegler is a professor in the food science department at Penn State University in the USA.

Science and Technology of Enrobed and Filled Chocolate, Confectionery and Bakery Products Geoff Talbot, 2009-06-26. Enrobed and filled confectionery and bakery products such as praline style chocolates, confectionery bars, and chocolate coated biscuits and ice creams are popular with consumers. The coating and filling can negatively affect product quality and shelf life, but with the correct product design and manufacturing technology, the characteristics of the end product can be much improved. This book provides a comprehensive overview of quality issues affecting enrobed and filled products and strategies to enhance product quality. Part one reviews the formulation of coatings and fillings, with chapters on key topics such as chocolate manufacture, confectionery fats, compound coatings, and fat and sugar based fillings. Product design issues such as oil moisture and ethanol migration, and chocolate and filling rheology are the focus of Part two. Shelf life prediction and testing are also discussed. Part three then covers the latest ingredient preparation and manufacturing technology for optimum product quality. Chapters examine tempering, enrobing, chocolate panning, production of chocolate shells, and deposition technology. With its experienced team of authors, *Science and Technology of Enrobed and Filled Chocolate, Confectionery and Bakery Products* is an essential purchase for professionals in the chocolate confectionery and bakery industries. Provides a comprehensive review of quality issues affecting enrobed and filled products.
