Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain

[Artificial Intelligence in order to facilitate Diagnoses and Treatment. The Opportunity Smart Cities give](#) Subjects Sina Kiene, 2021-04-29. Bachelor Thesis from the year 2020 in the subject Computer Sciences Artificial Intelligence grade 1-3 University of Applied Sciences Hamburg language English abstract. This bachelor thesis is based on the approach of providing nowadays society with solutions through the advancement of Artificial Intelligence in order to improve their quality of life. For the reason that the obstacles within the health sector are evolving in a negative sense, a special focus within this concept is laid on Artificial Intelligence systems' impact within the health sector of mental illnesses. Thus being said, the structure of the thesis focuses on four key theories in the beginning, which arise over and over within the thesis. These four key theories included The Wave Approach by Toeffler, the definition of three identities Neuroscience and Mental Illnesses, burn out, depression, and anxiety. Nevertheless, the thesis was examined in several other parts, such as Artificial Intelligence and the technology behind it, the implementation of AI in smart cities, pattern recognition, and monitoring in the health sector. By focusing on such areas, analysing and connecting them with past approaches, the impact of the data was described and analysed. Thus being said, the thesis approach was coming to the conclusion that through the implementation of Artificial Intelligence systems, such as voice recognition systems and facial recognition systems, the area of diagnosing mental illnesses and improving treatment, as well as reaching for quicker response rates in regards to emergencies, can be reached.
