

API Recommended Practice 2D

Operation and Maintenance of Offshore Cranes

SEVENTH EDITION (REVISION 2014) 1201-0001-2014 PRODUCT NO. 940007

This recommended practice addresses general principles for the safe installation and maintenance of offshore production-related lifting systems on fixed or floating offshore platforms, offshore supply vessels, jack-up drilling rigs, semi-submersible drilling rigs and other types of mobile offshore drilling units (MODUs). This document also provides recommendations and instructions for personnel working on erecting, service operations and testing of temporary cranes that are removed offshore.

These applications (as follows) are not covered by this document:

- a) Offshore oil exploration and production applications. These cranes are typically mounted on a fixed structure, platform, structure, floating platform, structure, or ship-shaped vessel used in drilling and production operations for offshore oil and gas wells.
- b) Offshore applications. Fixed lifting devices (rated for 20,000 lbs (9072 kg) or more) are mounted on surface vessels used to lift and move offshore structures, while diving bells systems, surface compressors, and other materials are hoisted, lowered, moved, etc. (in line with the API RP 2D applications).
- c) Floating applications. Cranes for floating applications are included on barges, self-erecting cranes on other vessels, and are used in construction and major operations above and below the sea surface.

Equipment as a result of such testing used only for routine lifting operations (in line with the API RP 2D) are not included in the scope of this recommended practice.

Lifting devices not covered by this document should be applied, installed and maintained in accordance with the manufacturer's recommendations.
