Glowinski,2008-01-22 When Herb Keller suggested more than two years ago that we update our lectures held at the Tata Institute of Fundamental Research in 1977 and then have it published in the collection Springer Series in Computational Physics we thought at first that it would be an easy task Actually we realized very quickly that it would be more complicated than what it seemed at first glance for several reasons 1 The first version of Numerical Methods for Nonlinear Variational Problems was in fact part of a set of monographs on numerical mat matics published in a short span of time by the Tata Institute of Fun mental Research in its well known series Lectures on Mathematics and Physics as might be expected the first version systematically used the material of the above monographs this being particularly true for Lectures on the Finite Element Method by P G Ciarlet and Lectures on

Optimization Theory and Algorithms by J Cea This second version had to be more self contained This necessity led to some minor additions in Chapters I IV of the original version and to the introduction of a chapter namely Chapter Y of this book on relaxation methods since these methods play an important role in various parts of this book

**Introduction to Plasma Physics and Controlled Fusion** Francis F. Chen,2013-03-09 TO THE SECOND EDITION In the nine years since this book was first written rapid progress has been made scientifically in nuclear fusion space physics and nonlinear plasma theory At the same time the energy shortage on the one hand and the exploration of Jupiter and Saturn on the other have increased the national awareness of the important applications of plasma physics to energy production and to the understanding of our space environment In magnetic confinement fusion this period has seen the attainment 13 of a Lawson number  $nTE$  of  $2 \times 10^{21} \text{ cm}^{-3} \text{ sec}$  in the Alcator tokamaks at MIT neutral beam heating of the PL T tokamak at Princeton to  $KT_i$  6 5 keV increase of average to 3% 5% in tokamaks at Oak Ridge and General Atomic and the stabilization of mirror confined plasmas at Livermore together with injection of ion current to near field reversal conditions in the 2XII device Invention of the tandem mirror has given magnetic confinement a new and exciting dimension New ideas have emerged such as the compact torus surface field devices and the E T mirror torus hybrid and some old ideas such as the stellarator and the reversed field pinch have been revived Radiofrequency heating has become a new star with its promise of dc current drive Perhaps most importantly great progress has been made in the understanding of the MHD behavior of toroidal plasmas tearing modes magnetic VII VIII islands and disruptions
