Adventures in Stochastic Processes Sidney I. Resnick, 1992-09-03 Stochastic processes are necessary ingredients for building models of a wide variety of phenomena exhibiting time varying randomness This text offers easy access to this fundamental topic for many students of applied sciences at many levels It includes examples exercises applications and computational procedures It is uniquely useful for beginners and non beginners in the field No knowledge of measure theory is presumed **Introduction to Matrix Analytic Methods in Stochastic Modeling** G. Latouche, V.

Ramaswami, 1999-01-01 Presents the basic mathematical ideas and algorithms of the matrix analytic theory in a readable up to date and comprehensive manner **Numerical Methods for Structured Markov Chains** Dario A. Bini, Guy Latouche, Beatrice Meini, 2005-02-03 Intersecting two large research areas numerical analysis and applied probability queuing theory this book is a self contained introduction to the numerical solution of structured Markov chains which have a wide applicability in queuing theory and stochastic modeling and include M/G/1 and GI/M/1 type Markov chain quasi birth death processes non skip free queues and tree like stochastic processes Written for applied probabilists and numerical analysts but accessible to engineers and scientists working on telecommunications and evaluation of computer systems performances it provides a systematic treatment of the theory and algorithms for important families of structured Markov chains and a thorough overview of the current literature The book consisting of nine Chapters is presented in three parts Part 1 covers a basic description of the fundamental concepts related to Markov chains a systematic treatment of the structure matrix tools including finite Toeplitz matrices displacement operators FFT and the infinite block Toeplitz matrices their relationship with matrix power series and the fundamental problems of solving matrix equations and computing canonical factorizations Part 2 deals with the description and analysis of structure Markov chains and includes M/G/1 quasi birth death processes non skip free queues and tree like processes Part 3 covers solution algorithms where new convergence and applicability results are proved Each chapter ends with bibliographic notes for further reading and the book ends with an appendix collecting the main general concepts and results used in the book a list of the main annotations and algorithms used in the book and an extensive index **Financial Modelling with Jump Processes** Rama Cont, Peter

The Informational Complexity of Learning Partha Niyogi, 2012-12-06 Among other topics The Informational Complexity of Learning Perspectives on Neural Networks and Generative Grammar brings together two important but very different learning problems within the same analytical framework The first concerns the problem of learning functional mappings using neural networks followed by learning natural language grammars in the principles and parameters tradition of Chomsky These two learning problems are seemingly very different Neural networks are real valued infinite dimensional continuous mappings On the other hand grammars are boolean valued finite dimensional discrete symbolic mappings Furthermore the research communities that work in the two areas almost never overlap The book s objective is to bridge this gap It uses the formal techniques developed in statistical learning theory and theoretical computer science over the last decade to analyze both kinds of learning problems By asking the same question how much information does it take to learn of both problems it highlights their similarities and differences Specific results include model selection in neural networks active learning language learning and evolutionary models of language change The Informational Complexity of Learning Perspectives on Neural Networks and Generative Grammar is a very interdisciplinary work Anyone interested in the interaction of computer science and cognitive science should enjoy the book Researchers in artificial intelligence neural networks linguistics theoretical computer science and statistics will find it particularly relevant
