

The Right Ball FORE You

Hypothesis

The amount of water that will be absorbed by a plant will be directly related to the amount of water that is given to it. If I give a plant 100ml of water, it will grow taller than if I give it 50ml or 25ml of water.

Plant No. 10	Plant No. 11	Plant No. 12

Materials

- 3 identical plants
- 3 different amounts of water
- 3 rulers
- 3 pots
- 3 soil samples

Results

Over the course of the experiment, the plants that received the most water (100ml) grew the tallest, reaching a height of 20cm by Day 3. The plants that received 50ml of water grew to 16cm, and the plants that received 25ml of water grew to 12cm. This supports the hypothesis that more water leads to greater plant growth.

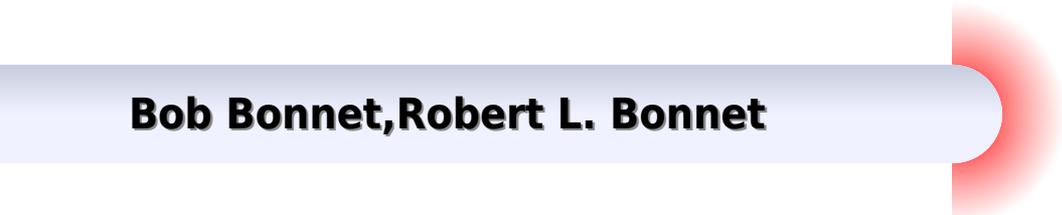

Conclusion

The results of this experiment show that the amount of water a plant receives has a significant impact on its growth. The plants that received the most water grew the tallest, while the plants that received the least water grew the shortest. This demonstrates that water is a crucial factor in plant growth.
