Comprehensive Nuclear Materials, 2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of
radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very
different from conventional materials This is evident for the four major technological challenges the nuclear technology
domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next
generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate
and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties
of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their
behavior in order to assess their performance and to determine the limits of operation *Comprehensive Nuclear Materials*
Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear
material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of
nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The

researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and
updated and a significant number of new topics are covered in completely new material During the ten years between the
