Bayesian Inference In Dynamic Econometric Models Advanced Texts In Econometrics:

Bayesian Inference in Dynamic Econometric Models Luc Bauwens, Michel Lubrano, Jean-François Richard, 2000-01-06 This book contains an up to date coverage of the last twenty years advances in Bayesian inference in econometrics with an emphasis on dynamic models It shows how to treat Bayesian inference in non linear models by integrating the useful developments of numerical integration techniques based on simulations such as Markov Chain Monte Carlo methods and the long available analytical results of Bayesian inference for linear regression models It thus covers a broad range of rather recent models for economic time series such as non linear models autoregressive conditional heteroskedastic regressions and cointegrated vector autoregressive models It contains also an extensive chapter on unit root inference from the Bayesian viewpoint Several examples illustrate the methods

Case Studies in Bayesian Statistical Modelling and Analysis

Clair L. Alston, Kerrie L. Mengersen, Anthony N. Pettitt, 2012-10-10 Provides an accessible foundation to Bayesian analysis using real world models This book aims to present an introduction to Bayesian modelling and computation by considering real case studies drawn from diverse fields spanning ecology health genetics and finance Each chapter comprises a description of the problem the corresponding model the computational method results and inferences as well as the issues that arise in the implementation of these approaches Case Studies in Bayesian Statistical Modelling and Analysis Illustrates how to do Bayesian analysis in a clear and concise manner using real world problems Each chapter focuses on a real world problem and describes the way in which the problem may be analysed using Bayesian methods Features approaches that can be used in a wide area of application such as health the environment genetics information science medicine biology industry and remote sensing Case Studies in Bayesian Statistical Modelling and Analysis is aimed at statisticians researchers and practitioners who have some expertise in statistical modelling and analysis and some understanding of the basics of Bayesian statistics but little experience in its application Graduate students of statistics and biostatistics will also find this book beneficial

Essays in Honor of M. Hashem Pesaran

Alexander Chudik, Cheng Hsiao, Allan Timmermann, 2022-01-18 The collection of chapters in Volume 43 Part B of Advances in Econometrics serves as a tribute to one of the most innovative influential and productive econometricians of his generation Professor M Hashem Pesaran

Introduction to Bayesian

Econometrics Edward Greenberg, 2013 This textbook explains the basic ideas of subjective probability and shows how subjective probabilities must obey the usual rules of probability to ensure coherency It defines the likelihood function prior distributions and posterior distributions It explains how posterior distributions are the basis for inference and explores their basic properties Various methods of specifying prior distributions are considered with special emphasis on subject matter considerations and exchange ability The regression model is examined to show how analytical methods may fail in the derivation of marginal posterior distributions The remainder of the book is concerned with applications of the theory to important models that are used in economics political science biostatistics and other applied fields New to the second edition

is a chapter on semiparametric regression and new sections on the ordinal probit item response factor analysis ARCH GARCH and stochastic volatility models The new edition also emphasizes the R programming language

Readings in Unobserved Components Models, 2005-04-07 This book presents a collection of readings which give the reader an idea of the nature and scope of unobserved components UC models and the methods used to deal with them It contains four parts three of which concern recent theoretical developments in classical and Bayesian estimation of linear nonlinear and non Gaussian UC models signal extraction and testing and one is devoted to selected econometric applications The first part focuses on the linear state space model the readings provide insight on prediction theory signal extraction and likelihood inference for non stationary and non invertible processes diagnostic checking and the use of state space methods for spline smoothing Part II deals with applications of linear UC models to various estimation problems concerning economic time series such as trend cycle decompositions seasonal adjustment and the modelling of the serial correlation induced by survey sample design The issues involved in testing in linear UC models are the theme of part III which considers tests concerned with whether or not certain variance parameters are zero with special reference to stationarity tests Finally part IV is devoted to the advances concerning classical and Bayesian inference for non linear and non Gaussian state space models an area that has been evolving very rapidly during the last decade paralleling the advances in computational inference using stochastic simulation techniques The book is intended to give a relatively self contained presentation of the methods and applicative issues For this purpose each part comes with an introductory chapter by the editors that provides a unified view of the literature and the many important developments that have occurred in the last years

Linear Factor Models in Finance John Knight, 2004-12-01 The determination of the values of stocks bonds options futures and derivatives is done by the scientific process of asset pricing which has developed dramatically in the last few years due to advances in financial theory and econometrics This book covers the science of asset pricing by concentrating on the most widely used modelling technique called Linear Factor Modelling Linear Factor Models covers an important area for Quantitative Analysts Investment Managers who are developing Quantitative Investment Strategies Linear factor models LFM are part of modern investment processes that include asset valuation portfolio theory and applications linear factor models and applications dynamic asset allocation strategies portfolio performance measurement risk management international perspectives and the use of derivatives The book develops the building blocks for one of the most important theories of asset pricing Linear Factor Modelling Within this framework we can include other asset pricing theories such as the Capital Asset Pricing Model CAPM arbitrage pricing theory and various pricing formulae for derivatives and option prices As a bare minimum the reader of this book must have a working knowledge of basic calculus simple optimisation and elementary statistics In particular the reader must be comfortable with the algebraic manipulation of means variances and covariances of linear combination s of random variables Some topics may require a greater mathematical sophistication Covers the latest methods in this area Combines

actual quantitative finance experience with analytical research rigour Written by both quantitative analysts and academics who work in this area

Periodic Time Series Models Philip Hans Franses, Richard Paap, 2004-03-25 This book considers periodic time series models for seasonal data characterized by parameters that differ across the seasons and focuses on their usefulness for out of sample forecasting Providing an up to date survey of the recent developments in periodic time series the book presents a large number of empirical results The first part of the book deals with model selection diagnostic checking and forecasting of univariate periodic autoregressive models Tests for periodic integration are discussed and an extensive discussion of the role of deterministic regressors in testing for periodic integration and in forecasting is provided The second part discusses multivariate periodic autoregressive models It provides an overview of periodic cointegration models as these are the most relevant This overview contains single equation type tests and a full system approach based on generalized method of moments All methods are illustrated with extensive examples and the book will be of interest to advanced graduate students and researchers in econometrics as well as practitioners looking for an understanding of how to approach seasonal data

Stochastic Volatility, 2005-03-10 Stochastic volatility is the main concept used in the fields of financial economics and mathematical finance to deal with time varying volatility in financial markets This book brings together some of the main papers that have influenced the field of the econometrics of stochastic volatility and shows that the development of this subject has been highly multidisciplinary with results drawn from financial economics probability theory and econometrics blending to produce methods and models that have aided our understanding of the realistic pricing of options efficient asset allocation and accurate risk assessment A lengthy introduction by the editor connects the papers with the literature

The Cointegrated VAR Model Katarina Juselius, 2006-12-07 This valuable text provides a comprehensive introduction to VAR modelling and how it can be applied In particular the author focuses on the properties of the Cointegrated VAR model and its implications for macroeconomic inference when data are non stationary The text provides a number of insights into the links between statistical econometric modelling and economic theory and gives a thorough treatment of identification of the long run and short run structure as well as of the common stochastic trends and the impulse response functions providing in each case illustrations of applicability This book presents the main ingredients of the Copenhagen School of Time Series Econometrics in a transparent and coherent framework The distinguishing feature of this school is that econometric theory and applications have been developed in close cooperation The guiding principle is that good econometric work should take econometrics institutions and economics seriously The author uses a single data set throughout most of the book to guide the reader through the econometric theory while also revealing the full implications for the underlying economic model To test ensure full understanding the book concludes with the introduction of two new data sets to combine readers understanding of econometric theory and economic models with economic reality

Bayesian Econometric Methods Gary Koop, Dale J. Poirier, Justin L. Tobias, 2007-01-15
This volume in the Econometric Exercises series contains questions and answers to provide students with useful practice as they attempt to master Bayesian econometrics. In addition to many theoretical exercises, this book contains exercises designed to develop the computational tools used in modern Bayesian econometrics. The latter half of the book contains exercises that show how these theoretical and computational skills are combined in practice to carry out Bayesian inference in a wide variety of models commonly used by econometricians. Aimed primarily at advanced undergraduate and graduate students studying econometrics, this book may also be useful for students studying finance, marketing, agricultural economics, business economics, or more generally any field which uses statistics. The book also comes equipped with a supporting website containing all the relevant data sets and MATLAB computer programs for solving the computational exercises. *American Book Publishing Record*, 2000-07 *Journal of Economic Literature*, 2007

This handbook is a single source for researchers and policymakers wanting to learn about Bayesian methods in specialized fields and for graduate students seeking to make the final step from textbook learning to the research frontier. It contains contributions by leading Bayesians on the latest developments in their specific fields of expertise. The volume provides broad coverage of the application of Bayesian econometrics in the major fields of economics and related disciplines, including macroeconomics, microeconomics, finance, and marketing. It reviews the state of the art in Bayesian econometric methodology with chapters on posterior simulation and Markov chain Monte Carlo methods, Bayesian nonparametric techniques, and the specialized tools used by Bayesian time series econometricians such as state space models and particle filtering. It also includes chapters on Bayesian principles and methodology.
