concept of healthy healthcare and posits that this new concept is necessary in light of a shortage of healthcare staff in the near future. Healthy healthcare implies that healthcare systems are designed, managed, and financed in balance with the available resources to improve workers' health and performance. Ultimately, a balanced perspective taking into account the patient, the staff, and the complex healthcare system will lead to a more resource-efficient delivery of high-quality healthcare services. The book synthesizes evidence-based practice and research on the links between healthcare services, employee health and wellbeing, and quality of healthcare from an interdisciplinary perspective. Written by leading experts in this rapidly expanding field of inquiry, this is the first book ever compiled on the subject with such scope and breadth. It discusses how to conduct interventions and research on healthy healthcare with different populations and settings. The chapters critically examine the links between these pillars and identify research gaps in both methodology and content from the perspectives of psychology, medicine, nursing, economy, law, technology, management, and more. This innovative book is of interest to researchers and students of health sciences, public health, health economics, and allied disciplines, as well as to stakeholders in the healthcare industry. Service Chain Management Christos Voudouris, Gilbert Owusu, Raphael Dorne, David Lesaint, 2007-12-18. Service chain management enables service organisations to improve customer satisfaction and reduce operational costs through intelligent and optimised forecasting, planning, and scheduling of the service chain and its associated resources such as people, networks, and other assets. The area is quite broad, covering field force and workforce, automation, network, and asset planning, and also aspects of customer relationship management, human resources systems, and enterprise resource planning. Furthermore, it addresses the key challenge of how all these technologies and systems are integrated into a cohesive blueprint. In this book, Christos Voudouris and his group, together with experts from industry and academia, present the latest innovations and technologies used to manage the operations of a service company. The viewpoints presented are based on the BT experience and on associated research and development in collaborating universities and partner companies. The focus is on real-world challenges and how technologies can be used to overcome practical problems in a way that doesn't just survive but thrives. The unique combination of technologies, experiences, and systems, looked at from the different perspectives of service providers and users, and combined with advice on successful benefit realisation and agile delivery of solutions, makes this an indispensable read for managers and system architects in the service industry.
