*Mathematical Curiosity* Roza Leikin, Jinfa Cai, Alexander Karp, 2026-01-01 This book represents a pioneering effort to establish mathematical curiosity as its own field of study within mathematics education The authors take a multifaceted approach examining curiosity through three key lenses cognitive how the mind processes and engages with mathematical concepts affective the emotional and motivational aspects of mathematical learning and social how curiosity develops through interaction with others The historical and cultural perspectives offer valuable context by exploring how different societies and time periods have understood and cultivated mathematical wonder This broader view helps educators understand that curiosity isn't just a modern pedagogical tool but has deep roots in how humans have always engaged with mathematical thinking The practical applications section likely provides concrete strategies and techniques that teachers can implement immediately Rather than remaining purely theoretical the book bridges the gap between research findings and classroom reality offering evidence based methods for nurturing student curiosity By positioning mathematical curiosity as a distinct scholarly domain the authors are essentially arguing that this area deserves dedicated research attention theoretical development and practical exploration This could lead to new research methodologies assessment approaches and pedagogical frameworks specifically designed around curiosity driven learning The book's ultimate goal is transformative not just to inform readers about curiosity but to actively engage their own sense of mathematical wonder and potentially recruit them as contributors to this emerging field

Bank,1993 The Republic of Korea s industrial policy has directed that nation s economy through nearly three decades of spectacular growth But the authors of this paper maintain that this policy is showing signs of being outmoded The time has come the authors argue for the Korean government to stop managing the economy s structural development and to redefine the responsibilities of business and government Under this proposed compact the allocation of resources would shift from the government to the private industrial and financial sectors The transformation of the government bureaucracy from an ad hoc policy role to one of a transparent and predictable regulator is a key to the success of this undertaking These new directions would present the government with enormous challenges Greater competitive discipline and regulatory oversight would be required While dealing with the complexities of the transition the government would have to maintain macroeconomic stability and the momentum of savings and investment For comparison the study examines the industrial economies of France Germany Japan and the United States which underwent similar shifts
