*MATLAB for Civil Engineers* Dimitrios Sargiotis,2025-05-21 This book is a comprehensive and rigorous guide to MATLAB for Civil Engineers bridging the critical gap between theoretical mathematics and practical engineering solutions With an approachable introduction for students and deep insights for experienced professionals it caters to a wide range of audiences across civil engineering disciplines environmental structural geotechnical and transportation engineering Structured to guide readers progressively the book begins with foundational MATLAB operations such as syntax and matrix manipulation then advances into sophisticated engineering applications including optimization numerical methods and data visualization It covers essential MATLAB functionalities offering detailed instruction on computation visualization and programming all within the context of solving real world engineering challenges What sets this book apart is its hands on approach Readers are immersed in practical learning through real world case studies examples and step by step exercises designed to reinforce key concepts The text provides both academic and professional readers with the tools they need to model analyze and optimize engineering systems using MATLAB ensuring they are equipped to handle both routine and complex engineering challenges with confidence By the end readers will not only master MATLAB s powerful tools but will also understand how to apply them directly to critical civil engineering problems positioning themselves to innovate and lead in a field where computational proficiency is increasingly essential *Modeling and Computing for Geotechnical Engineering* M.S.

Rahman,M.B. Can Ulker,2018-09-03 Modeling and computing is becoming an essential part of the analysis and design of an engineered system This is also true of geotechnical systems such as soil foundations earth dams and other soil structure systems The general goal of modeling and computing is to predict and understand the behaviour of the system subjected to a variety of possible conditions scenarios with respect to both external stimuli and system parameters which provides the basis for a rational design of the system The essence of this is to predict the response of the system to a set of external forces The modelling and computing essentially involve the following three phases a Idealization of the actual physical problem b Formulation of a mathematical model represented by a set of equations governing the response of the system and c Solution of the governing equations often requiring numerical methods and graphical representation of the numerical results This book will introduce these phases MATLAB codes and MAPLE worksheets are available for those who have bought the book Please contact the author at mbulker itu edu tr or canulker gmail com Kindly provide the invoice number and date of purchase *Geotechnical Engineering for the Preservation of Monuments and Historic Sites* Emilio Bilotta,Alessandro
